 The difference in rates between 1974-76 and 1992-98 is statistically significant ($p<.05$).
 The standard error of the survival rate is between 5 and 10 percentage points.
 The standard error of the survival rate is greater than 10 percentage points.

The EAPC is the Estimated Annual Percent Change over the time interval.

- Statistic not shown. Rate based on less than 25 cases for the time interval. Trend based on less than 10 cases for at least one year within the time interval.

ⁱ Incidence data are from the 12 SEER areas (San Francisco, Connecticut, Detroit, Hawaii, Iowa, New Mexico, Seattle, Utah, Atlanta, San Jose-Monterey, Los Angeles, and Alaska Native Registry).

[⊗] Hispanic is not mutually exclusive from whites, blacks, Asian Pacific Islanders, and American Indians/Alaska Natives. Incidence data for Hispanics does not include cases from Detroit, Hawaii and Alaska Native Registry. For mortality, information is included for all states except Connecticut, Oklahoma, New York, and New Hampshire.

[♦] Mortality data are analyzed from a public use file provided by the National Center for Health Statistics (NCHS).

* The EAPC is significantly different from zero ($p < .05$).
