a US 2001 cancer prevalence counts are based on 2001 cancer prevalence proportions from the SEER 9 registries and $1 / 1 / 2001$ US population estimates based on the average of 2000 and 2001 population estimates from the US Bureau of the Census.
bcde
(b) Prevalence estimates are ambiguous for those with multiple cancers, unless the tumor inclusion criteria are understood. Depending on the application, different inclusion criteria may be appropriate. This table provides three different methods of tumor inclusion: (c) First invasive tumor ever; (d) First invasive tumor for each cancer site diagnosed during the previous 26 years (1975-2000); (e) First invasive tumor for each cancer site diagnosed during the previous 5 years (1996-2000).
For definitions (d) and (e) all sites is treated as a separate cancer "site".
Consider a woman who had three invasive cancers: Melanoma in 1981; Breast cancer in 1997; Melanoma in 1998.

In method (c) the melanoma is the woman's first cancer, and is counted for the melanoma and all sites 26-year limited duration prevalence. For 5-year limited duration prevalence, the woman is not counted at all since her first cancer occurred 20 years ago.
In method (d) the 1981 melanoma is counted for the melanoma and all sites 26-year limited duration prevalence. The 1997 breast cancer is counted for the breast 5-year and 26 -year limited duration prevalence.
In method (e) the 1997 breast cancer is counted for the breast cancer and all sites 5-year limited duration prevalence. The 1998 melanoma is counted for 5-year limited duration prevalence for melanoma.

a US 2001 cancer prevalence counts are based on 2001 cancer prevalence proportions from the SEER registries and 1/1/2001 US population estimates based on the average of 2000 and 2001 population estimates from the US Bureau of the Census. Prevalence was calculated using the First Malignant Primary Only for a person.
Statistics based on (b) SEER 9 Areas (c) SEER 11 Areas (d) SEER 11 Areas excluding Hawaii and Detroit. Maximum limited-duration prevalence: 26 years for 1975-2001 SEER 9 data; 11 years for $1990-2001$ SEER 11 data (used to calculate prevalence for Hispanics and Asian Pacific Islanders)
gh Percentages are age-adjusted to the 2000 US standard population by 5-year age groups. $\quad$ (g) Cases diagnosed 26 years or more ago were estimated using the completeness index method (Capocaccia et. al. 1997 , Merrill et (g) Cases diagnosed 26 years or more ago were estimated using the completene
al. 2000). (h) Complete prevalence is obtained by summing 0 to $<26$ and $>=26$.

Statistic not shown. Statistic based on fewer than 5 cases estimated alive in SEER for the time interval.

+ Not available.

a US 2001 cancer prevalence counts are based on 2001 cancer prevalence proportions from the SEER registries and $1 / 1 / 2001$ US population estimates based on the average of 2000 and 2001 population estimates from the US Bureau of the Census. Prevalence was bcd calculated using the First Malignant Primary Only for a person.
Statistics based on b) SEER 9 Areas 26 C) SEER 11 Areas d) SEER 11 Areas excluding Hawaii and Detroit.
Maximum limited-duration prevalence: 26 years for $1975-2001$ SEER 9 data; 11 years for $1990-2001$ SEER 11 data (used to calculate prevalence for Hispanics and Asian Pacific Islanders).
hi Percentages are age-adjusted to the 2000 US standard population by 5-year age groups.
(g) Cases diagnosed 26 years or more ago were estimated using the completeness index method (Capocaccia et. al. 1997, Merrill et. al. 2000) (h) Complete prevalence is obtained by summing 0 to $<26$ and $>=26$. (i) Age-specific completeness index was approximated

- Statistic not shown. Statistic based on fewer than 5 cases estimated alive in SEER for the time interval.

a US 2001 cancer prevalence counts are based on 2001 cancer prevalence proportions from the SEER registries and $1 / 1 / 2001$ US population estimates based on the average of 2000 and 2001 population estimates from the US Bureau of the Census. Prevalence was calculated using the First Malignant Primary only for a person. Statistics based on b) SEER 9 Areas C) SEER 11 Areas d) SEER 11 Areas excluding Hawaii and Detroit. Maximum limited-duration prevalence: 26 years for 1975-2001 SEER 9 data; 11 years for $1990-2001$ SEER 11 data (used to calculate prevalence for Hispanics and Asian Pacific Islanders).
h Percentages are age-adjusted to the 2000 US standard population by 5-year age groups. $\quad$ ( Cases diagnosed 26 years or more ago were estimated using the completeness index method (Capocaccia et. al. 1997 , Merrill et. (g) Cases diagnosed 26 years or more ago were estimated using the completene
al. 2000). (h) Complete prevalence is obtained by summing 0 to $<26$ and $>=26$.

Statistic not shown. Statistic based on fewer than 5 cases estimated alive in SEER for the time interval.

US 2001 cancer prevalence counts are based on 2001 cancer prevalence proportions from the SEER registries and $1 / 1 / 2001$ US population estimates based on the average of 2000 and 2001 population estimates from the US Bureau of the Census. Prevalence was calculated using the First Malignant Primary Only for a person.
bcd Statistics based on b) SEER 9 Areas C) SEER 11 Areas d) SEER 11 Areas excluding Hawaii and Detroit. Maximum limited-duration prevalence: 26 years for 1975-2001 SEER 9 data; 11 years for $1990-2001$ SEER 11 data (used to calculate prevalence for Hispanics and Asian Pacific Islanders).
h Percentages are age-adjusted to the 2000 US standard population by 5-year age groups. $\quad$ ( Cases diagnosed 26 years or more ago were estimated using the completeness index method (Capocaccia et. al. 1997 , Merrill et. (g) Cases diagnosed 26 years or more ago were estimated using the completene
al. 2000). (h) Complete prevalence is obtained by summing 0 to $<26$ and $>=26$.

+ Statistic not shown. Statistic based on fewer than 5 cases estimated alive in SEER for the time interval.

a US 2001 cancer prevalence counts are based on 2001 cancer prevalence proportions from the SEER registries and $1 / 1 / 2001$ US population estimates based on the average of 2000 and 2001 population estimates from the US Bureau of the Census. Prevalence was calculated using the First Malignant Primary Only for a person
c d Statistics based on b) SEER 9 Areas C) SEER 11 Areas d) SEER 11 Areas excluding Hawaii and Detroit.
Maximum limited-duration prevalence: 26 years for $1975-2001$ SEER 9 data; Maximum limited-duration prevalence: 26 years for 1975-2001 SEER 9 data; 11 years for $1990-2001$ SEER 11 data (used to calculate prevalence for Hispanics and Asian Pacific Islanders).
h Percentages are age-adjusted to the 2000 US standard population by 5-year age groups. $\quad$ ( Cases diagnosed 26 years or more ago were estimated using the completeness index method (Capocaccia et. al. 1997 , Merrill et. (g) Cases diagnosed 26 years or more ago were estimated using the completene
al. 2000). (h) Complete prevalence is obtained by summing 0 to $<26$ and $>=26$.

- Statistic not shown. Statistic based on fewer than 5 cases estimated alive in SEER for the time interval.

a US 2001 cancer prevalence counts are based on 2001 cancer prevalence proportions from the SEER registries and $1 / 1 / 2001$ US population estimates based on the average of 2000 and 2001 population estimates from the US Bureau of the Census. Prevalence was bcd calculated using the First Malignant Primary Only for a person.
b cod
e prevalence for Hispanics and Asian Pacific Islanders)
ghi Percentages are age-adjusted to the 2000 US standard population by 5-year age groups
(g) Cases diagnosed 26 years or more ago were estimated using the completeness index method (Capocaccia et. al. 1997, Merrill et. al. 2000) (h) Complete prevalence is obtained by summing 0 to $<26$ and $>=26$. (i) Age-specific completeness index was approximated

- Statistic not shown. Statistic based on fewer than 5 cases estimated alive in SEER for the time interval.

a US 2001 cancer prevalence counts are based on 2001 cancer prevalence proportions from the SEER registries and $1 / 1 / 2001$ US population estimates based on the average of 2000 and 2001 population estimates from the US Bureau of the Census. Prevalence was bcd calculated using the First Malignant Primary Only for a person.

- Statistics based on b) SEER 9 Areas c) SEER 11 Areas d) SEER 11 Areas excluding Hawaii and Detroit.
- Maximum limited-duration prevalence: 26 years for 1975-2001 SEER 9 data; 11 years for $1990-2001$ SEER 11 data (used to calculate prevalence for Hispanics and Asian Paciflc Islanders)
ghi Percentages are age-adjusted to the 2000 US standard population by 5-year age groups.
(g) Cases diagnosed 26 years or more ago were estimated using the completeness index method (Capocaccia et. al. 1997, Merrill et. al. 2000) (h) Complete prevalence is obtained by summing 0 to $<26$ and $>=26$. (i) Age-specific completeness index was approximated
- Statistic not shown. Statistic based on fewer than 5 cases estimated alive in SEER for the time interval.

a US 2001 cancer prevalence counts are based on 2001 cancer prevalence proportions from the SEER registries and $1 / 1 / 2001$ US population estimates based on the average of 2000 and 2001 population estimates from the US Bureau of the Census. Prevalence was calculated using the First Malignant Primary Only for a person.
b c d Statistics based on b) SEER 9 Areas C) SEER 11 Areas d) SEER 11 Areas excluding Hawaii and Detroit. Maximum limited-duration prevalence: 26 years for 1975-2001 SEER 9 data; 11 years for $1990-2001$ SEER 11 data (used to calculate prevalence for Hispanics and Asian Pacific Islanders).
h Percentages are age-adjusted to the 2000 US standard population by 5-year age groups. $\quad$ ( Cases diagnosed 26 years or more ago were estimated using the (Capocaccia et. al. 1997 , Merrill et. (g) Cases diagnosed 26 years or more ago were estimated using the completene
al. 2000). (h) Complete prevalence is obtained by summing 0 to $<26$ and $>=26$.

+ Statistic not shown. Statistic based on fewer than 5 cases estimated alive in SEER for the time interval.

a US 2001 cancer prevalence counts are based on 2001 cancer prevalence proportions from the SEER registries and $1 / 1 / 2001$ US population estimates based on the average of 2000 and 2001 population estimates from the US Bureau of the Census. Prevalence was calculated using the First Malignant Primary Only for a person.
b c d Statistics based on b) SEER 9 Areas C) SEER 11 Areas d) SEER 11 Areas excluding Hawaii and Detroit. Maximum limited-duration prevalence: 26 years for 1975-2001 SEER 9 data; 11 years for $1990-2001$ SEER 11 data (used to calculate prevalence for Hispanics and Asian Pacific Islanders).
h Percentages are age-adjusted to the 2000 US standard population by 5-year age groups. $\quad$ (g) Cases diagnosed 26 years or more ago were estimated using the (Capocaccia et. al. 1997 , Merrill et. (g) Cases diagnosed 26 years or more ago were estimated using the completene
al. 2000). (h) Complete prevalence is obtained by summing 0 to $<26$ and $>=26$.

+ Statistic not shown. Statistic based on fewer than 5 cases estimated alive in SEER for the time interval.
