

**LEGEND:** legend for the Location Visio documents.

- Location. The physical site at which registry operations are occurring.

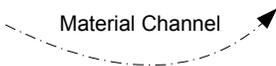

- Location with multiple instances. A single location type that represents many real things, such as Patient Residence. There are many patient residences, but they do not need to be distinguished for the purposes of this diagram.

- Data Channel. Line that represents a set of data traveling from one location to another. The arrow head signifies the direction of travel and data may flow in both directions.

- Participant Channel. Line that represents a participant (person) traveling from one location to another. The arrow head signifies the direction of travel and the person may travel in both directions.

- Material Channel. Line that either represents physical items traveling from one location to another or an actual connection between 2 locations. The arrow head signifies the direction of travel for material or from which location the connection is initiated.
