SUBJECT: ERRATA AND CORRECTIONS TO THIRD EDITION OF
EXTENT OF DISEASE 1988

In preparation for the publication of the *Comparative Staging Guide* and the *Summary Stage 2000*, a review was conducted of the *SEER Extent of Disease 1988, third edition* and the fifth edition of the *AJCC Cancer Staging Manual*. The following discrepancies were noted in EOD, and the recommended corrections should be added to the EOD manual.

These points were discussed at the 2/8/2000 Uniform Data Standards Committee conference call. The corrections should take place immediately and are retroactive to cases diagnosed January 1, 1998 and after.

Cases requiring review are identified by a **bold** instruction. The site name is abbreviated in the table below, but the correction applies to all sites in the scheme unless otherwise stated.

Certain terms have been added after code 80 to clarify further contiguous extension, and synonym have been added to some lymph node names such as jugulodigastric (subdigastric) and jugulo-omohyoid (supraomohyoid).
