#### Introduction

- *Note 1:* This section includes the following **primary sites**: Peripheral nerves C470-C479; cerebral meninges C700; spinal meninges C701; meninges NOS C709; brain C710-C719; spinal cord C720; cauda equina C721; olfactory nerve C722; optic nerve C723; acoustic nerve C724; cranial nerve NOS C725; overlapping lesion of brain and central nervous system C728; nervous system NOS C729; pituitary gland C751; craniopharyngeal duct C752; pineal gland C753.
- Note 2: Non-malignant intracranial and CNS tumors have a separate set of rules.
- *Note 3:* 2007 MPH Rules and 2018 Solid Tumor Rules are used based on **date of diagnosis**.
  - Tumors diagnosed 01/01/2007 through 12/31/2017: Use 2007 MPH Rules
  - Tumors diagnosed 01/01/2018 and later: Use 2018 Solid Tumor Rules
  - The original tumor diagnosed before 1/1/2018 and a subsequent tumor diagnosed 1/1/2018 or later in the same primary site: Use the 2018 Solid Tumor Rules.
- Note 4: There <u>must be</u> a histologic, cytologic, radiographic, or clinical diagnosis of a malignant neoplasm /3.
- **Note 5:** Tumors from a number of primary sites metastasize to the brain. Do not use these rules for tumors described as metastases; report metastatic tumors using the rules for that primary site.
- Note 6: Pilocytic astrocytoma/juvenile pilocytic astrocytoma is reportable in North America as a malignant neoplasm 9421/3.
  - See the Non-malignant CNS Rules when the primary site is optic nerve and the diagnosis is either optic glioma or pilocytic astrocytoma. The behavior for these tumors is non-malignant and coded 9421/1.
  - IMPORTANT FOR 2023 FORWARD: Beginning 1/1/2023, all cases diagnosed with pilocytic astrocytoma/juvenile pilocytic astrocytoma and new related terminology are to be reported with behavior /1. They will no longer be collected with malignant behavior (/3). See the Non-malignant CNS Rules.
- *Note 7:* Tables and rules refer to ICD-O rather than ICD-O-3. The specific version is not specified to allow for updates. Use the currently approved version of ICD-O and all updates.
- **Note 8:** For those sites/histologies which have recognized **biomarkers**, the biomarkers may aid in the identification of histologic type. Currently, there are clinical trials being conducted to determine whether these biomarkers can be used to identify multiple primaries. Follow the Multiple Primary Rules; do not code multiple primaries based on biomarkers.
- *Note 9:* See the Head and Neck Rules for coding paragangliomas.
- *Note 10:* Use Malignant CNS Rules for histologies other than paraganglioma arising in C47\_.

### **Equivalent or Equal Terms**

These terms can be used interchangeably:

- And; with
  - *Note:* "And" and "with" are used as synonyms when describing multiple histologies within a single tumor.
- Cerebrospinal fluid; CSF
- Dura; meninges
- Extradural; not within the meninges; within the cranium; within the skull but not within the cerebral meninges
- Extramedullary; outside medulla oblongata C700
- Infratentorial; below the tentorium cerebelli; either cerebellum or brainstem
- Intracranial; within the skull, within the cranium
- Intradural; between layers of the cerebral meninges; C700
- Intradural-extramedullary; within the spinal canal but outside of the nerves
- Intraspinal; occurring within the spinal column especially the vertebral canal; spinal nerve roots
- Site; topography
- Supratentorial; above the tentorium cerebelli; cerebrum
  - o Cerebrum contains frontal lobe, parietal lobe, occipital lobe, and temporal lobe
- Tentorium cerebelli; cerebellar tentorium
- Tumor; mass; lesion; neoplasm when
  - These terms are used <u>ONLY</u> to determine multiple primaries
  - o Do not use these terms for casefinding or determining reportability
- Type; subtype; variant
- WHO Grade 3 and WHO Grade 4; malignant; invasive; /3

#### Terms that are NOT Equivalent or Equal

This is a term that is **not equivalent**. There are no casefinding implications.

- Component is not equivalent to subtype/type/variant

  Note: Component is only coded when the pathologist specifies the component as a second carcinoma.
- Phenotype is not equivalent to subtype/type/variant
- WHO Grade is not equivalent to tumor grade

### **Changes from 2007 MPH Rules**

These changes are effective with cases diagnosed 1/1/2018 and later.

- 1. 2016 CNS WHO presents major restructuring of the diffuse gliomas, medulloblastomas and other embryonal tumors, and incorporates new entities that are defined by both histology and molecular features, including glioblastoma, IDH-wildtype and glioblastoma, IDH-mutant; diffuse midline glioma, H3 K27M-mutant, RELA fusion-positive ependymoma, medulloblastoma, WNT-activated and medulloblastoma, SHH-activated, and embryonal tumor with multilayered rosettes, C19MC-altered. The 2016 edition has added newly recognized neoplasms and has referred to some entities, variants and patterns as "not recommended" (previously called obsolete).
  - A. It has been determined that these "not recommended" terms no longer have diagnostic and/or biological relevance. For example, gliomatosis cerebri is a term which is no longer recommended. Gliomatosis cerebri is now termed a "growth pattern" rather than a histologic type.
  - B. Terms which are not recommended are not included in the tables. When one of these terms are used, refer to the ICD-O and all updates for the correct histology code. For example, glioma NOS is an umbrella term for all gliomas and astrocytomas. Glioma NOS is not recommended because diagnostic methodology is able to determine a more specific diagnosis.
- 2. **Rule change:** The 2007 rules said a glioblastoma multiforme (GBM) following an astrocytic or glial tumor was a single primary (recurrence). In the 2018 Solid Tumor Rules, GBM subsequent to an astrocytic or glial tumor is a multiple primary. GBM is now being collected as a new primary so it is possible to analyze the frequency with which these tumors recur in a more aggressive form (GBM).

#### 3. Clarifications:

- A. The following meningiomas are reportable: intraosseous, cavernous sinus and sphenoid wing.
- B. Multiple cerebral meningiomas are a single primary.
- C. Multiple brain tumors (same histology) are a single primary.
- D. Laterality is not used to determine multiple primaries.
- E. Timing is not used to determine multiple primaries.
- F. The brain (C710-C719) is a single primary site.
- G. Neurofibromatosis NOS, Neurofibromatosis 1 (NF1), Neurofibromatosis 2 (NF2), and schwannomatosis are genetic syndromes and not reportable neoplasms. People with this genetic syndrome do have a high risk of developing:
  - i. Non-reportable non-malignant tumors occurring in skin and sites other than CNS AND
  - ii. Reportable malignant tumors
- 4. The 2016 World Health Organization (WHO) Classification of Tumors of the Central Nervous System (CNS) contains newly recognized histologies and subtypes/variants. New codes/terms are identified by asterisks (\*) in **Table 3** in the Terms and Definitions.

#### New for 2023

- 1. Beginning with cases diagnosed 1/1/2023, pilocytic astrocytoma/juvenile pilocytic astrocytoma will **no longer be reported as malignant (/3)**. These neoplasms will continue to be reportable with a behavior of /1. Historically, pilocytic astrocytomas were coded as 9421/3 from 1976-2000. Beginning in 2001 with the release of ICD-O-3, WHO changed the behavior to /1, however, the standard setters opted to continue collecting these cases using malignant /3 behavior. This practice will continue through 12/31/2022.
- 2. WHO 5<sup>th</sup> Ed CNS Tumors has assigned a new histology to 9421/3. Beginning with cases diagnosed 1/1/2023, for surveillance purposes, code 9421/3 will be valid for the following histology *only:* 
  - A. High Grade astrocytoma with piloid features (HGAP)

### Reportability Criteria

CNS neoplasms must meet all three of the conditions below to be reported as malignant /3:

- 1. The **behavior** must be malignant /3:
  - A. Pathology designates the behavior as malignant/invasive, /3 OR
  - B. The tumor is a WHO Grade 3 or 4 (See Section 1: Table 1)
    - *Note 1:* WHO Grade 2 tumors may be non-malignant or malignant.
    - Note 2: Always code the behavior as designated by the pathologist.
    - **Note 3:** Never report a malignant /3 behavior code for a meningioma based on tumor extension to brain, skin of scalp, or other regional organs/tissue. Non-malignant CNS tumors can extend to the regional tissue and bone.
- 2. The primary site must be reportable (See Section 2: Table 2) AND
- 3. The **histology** must be reportable (See Section 2: Table 3)

### **Directory of Sections and Tables**

Information is presented in the general order in which a case is abstracted.

#### **Section 1**: Behavior Code

- A. **Priority Order** for Using Documentation to Assign Behavior
- B. Table 1: WHO Grades for Select CNS Neoplasms

### **Section 2: Reportable Primary Sites and Histologies**

- A. Priorities for Coding Primary Site
- **B. Reportable Primary Site Groups**
- C. Table 2: Reportable Primary Sites
- D. Table 3: Specific Histologies, NOS, and Subtypes/Variants
- E. Table 4: Coding Primary Site for Malignant Tumors of Cranial and Peripheral Nerves

### **Section 3**: Additional information to complete the abstract

- A. Conflicting information on Pathology report(s)
- B. Table 5: Paired Sites
- C. Table 6: Non-malignant CNS Tumors with the Potential of Transforming to Malignant Behavior

#### **Section 1: Behavior Code**

Note: Behavior determines which set of CNS rules should be used: malignant or non-malignant.

Instructions for using source documentation to determine behavior are in **priority order**. Start with Instruction 1 and **STOP** when you reach the instruction that applies to the case being abstracted. For example, when the **resection pathology** specifies behavior, use Instruction 1. **Do not** code the behavior using Instructions 2-5.

### Priority Order for Using Documentation to Assign Behavior

- 1. Pathology: Tissue from resection
  - A. Use the pathologist's description of malignant/invasive behavior
  - B. Cases are reportable as malignant when pathology states a WHO Grade 3 or 4
    - i. WHO Grade 2 may be either non-malignant or malignant. Use the pathologist's description of behavior (priority #1).
  - C. Never change behavior described by pathologist
- 2. Pathology: Tissue from biopsy
- 3. Cytology (usually cerebrospinal fluid)
- 4. Physician's documentation (no pathology report) in the following priority order:
  - A. Tumor Board
  - B. Documentation of original pathologic diagnosis and behavior
    - **Example:** Pathology report is not in the medical record. Oncology consult states biopsy was done in a different facility and cites the **original pathology** diagnosis including the **behavior**.
  - C. Documentation of behavior, no mention of original diagnosis
    - **Example:** Pathology report is not in the medical record. **Physician documents** the **behavior** as malignant, or WHO Grade 3 or 4, but **does not cite/mention original** pathology report as source of behavior classification.
- 5. Scans, in the following priority order:
  - A. MRI
  - B. CT
  - C. PET
  - D. Angiogram
- 6. When instructions 1-5 do not apply, use Table 1 to determine behavior.

### **Table 1: WHO Grades for Select CNS Neoplasms**

- **Note 1:** CNS WHO classifications use a grading scheme that is a "malignancy scale" ranging across a wide variety of neoplasms rather than a strict histologic grading system that can be applied equally to all tumor types.
- *Note 2:* See the SEER and COC Manuals for instructions on coding grade for CNS tumors.
- *Note 3:* The table <u>does not</u> contain all neoplasms that may occur in the CNS.
- *Note 4:* WHO does not provide Grades for all CNS and peripheral nerve neoplasms.

#### **WHO Grade Definitions**

WHO Grade	Definition
WHO Grade I	Circumscribed tumors of low proliferative potential associated with the possibility of cure
	following resection
WHO Grade II	Infiltrative tumors with low proliferative potential with increased risk of recurrence
WHO Grade III	Tumors with histologic evidence of malignancy, including nuclear atypia and mitotic
	activity, associated with an aggressive clinical course
WHO Grade IV	Tumors that are cytologically malignant, mitotically active, and associated with rapid
	clinical progression and potential for dissemination

### WHO Grade II CNS Tumors: Non-malignant and Malignant

Histologic grading is a means of predicting the biological behavior of a neoplasm. In the clinical setting, tumor grade is a key factor influencing the choice of therapies. WHO grade is based on histological features and is one component of a set of criteria used to predict response to therapy and outcomes.

WHO 4<sup>th</sup> Ed Tumors of CNS separates CNS entities into histologic groups. For example, diffuse astrocytic and oligodendroglial tumors are all malignant (/3). Some of the histologies that fall into this group have a WHO Grade II. They are malignant tumors and the grade predicts if the tumor is likely to transform into a more aggressive histology, determine treatment, and the prognosis.

For the most part, benign CNS tumors (/0) and uncertain if benign or malignant CNS tumors (/1) are WHO Grade I. They may be given a WHO Grade II based on histologic features, clinical findings, and genetic testing. Grade II CNS tumors tend to be slow growing but may spread into nearby tissue or recur. This does not necessarily indicate the tumor is invasive. It indicates the tumor may progress to a higher behavior. The grade also guides treatment, follow-up, and prognosis.

When a CNS tumor is stated to be WHO Grade II, code the corresponding ICD-O-3 code and behavior listed in ICD-O, ICD-O updates, or solid tumor rules. Code the WHO Grade in the appropriate SSDI data field.

Example: Astrocytoma, NOS, WHO Grade II code 9400/3

#### **Table Instructions**

- 1. Use the malignant CNS rules for all WHO Grade 3, 4, and WHO Grade 2 neoplasms with malignant /3 behavior.
- 2. Go to Section 1: Behavior Code to determine whether WHO Grade 2 neoplasms are non-malignant or malignant.
- 3. Use non-malignant CNS rules for all WHO Grade I (always non-malignant).

Column 1 contains the histology term.

Column 2 contains the WHO Grade assigned based on the molecular features of the histology.

Histology	WHO Grade
Anaplastic (malignant) meningioma	3
Anaplastic astrocytoma, IDH-mutant	3
Anaplastic ependymoma	3
Anaplastic ganglioglioma	3
Anaplastic oligodendroglioma IDH-mutant and 1p/19q-codeleted	3
Anaplastic pleomorphic xanthroastrocytoma	3
Angiocentric glioma	1
Atypical choroid plexus papilloma	2

Histology	WHO Grade
Atypical meningioma	2
Atypical teratoid/rhabdoid tumor	4
Central neurocytoma	2
Cerebellar liponeurocytoma	2
Chordoid glioma of third ventricle	2
Choroid plexus carcinoma	3
Choroid plexus papilloma	1
CNS embryonal tumor NOS	4
CNS embryonal tumor with rhabdoid features	4
Craniopharyngioma	1
Desmoplastic infantile astrocytoma and ganglioglioma	1
Diffuse astrocytoma, IDH-mutant	2
Diffuse midline glioma, H3K27M-mutant	4
Dysembryoplastic neuroepithelial tumor	1
Dysplastic gangliocytoma of cerebellum (Lhemitte-Duclos)	1
Ependymoma	2
Ependymoma, RELA fusion-positive	2 or 3
<i>Note:</i> Tissue/pathology reports or CAP protocol/summary will specify whether this is WHO Grade 2 or 3	
Extraventricular neurocytoma	2
Gangliocytoma	1
Glioblastoma, IDH-mutant	4
Glioblastoma, IDH-wildtype	4
Granular cell tumor	1
Hemangioblastoma	1

Histology	WHO Grade
Malignant peripheral nerve sheath tumor (MPNST)	2, 3, or 4
<i>Note:</i> Tissue/pathology reports or CAP protocol/summary will specify whether this is WHO Grade 2, 3, or 4	
Medulloblastoma (including all subtypes)	4
Medulloepithelioma	4
Meningioma	1
Myxopapillary ependymoma	1
Neurofibroma	1
Oligodendroglioma IDH-mutant and 1p/19q deleted	2
Papillary glioneuronal tumor	1
Papillary tumor of the pineal region	2 or 3
Note: Tissue/pathology reports or CAP protocol/summary will specify whether it is WHO Grade 2 or 3	
Perineuroma	1
Pilocytic astrocytoma	1
<i>Note:</i> Collected as malignant /3 in North America	
Pineal parenchymal tumor of intermediate differentiation	2 or 3
Note: Tissue/pathology reports or CAP protocol/summary will specify WHO Grade 2 or 3	
Pineoblastoma	4
Pineocytoma	1
Pituicytoma	1
Pleomorphic xanthroastrocytoma	2
Rosette-forming glioneuronal tumor	1
Schwannoma	1

Histology	WHO Grade
Solitary fibrous tumor/hemangiopericytoma	1, 2, or 3
Note: Tissue/pathology reports or CAP protocol/summary will specify WHO Grade 1, 2, or 3	
Spindle cell oncocytoma	1
Subependymal giant cell astrocytoma	1
Subependymoma	1

### Section 2: Reportable Primary Sites and Histologies

After determining behavior code, the next step is to confirm both the primary site and the histology are reportable.

- *Note 1:* **Peripheral nerves** are included in the Malignant CNS and Peripheral Nerve rules because:
  - All malignant tumors are reportable, including peripheral nerve tumors AND
  - The Malignant CNS and Peripheral Nerve rules contain the correct histologies and coding rules for tumors of peripheral nerves and meninges/dura.
- *Note 2:* Peripheral nerves are:
  - Extracranial/outside the cranium **OR**
  - Extradural/outside the spinal dura
- *Note 3:* The following malignant **meningiomas** are reportable:
  - Intraosseous

*Note:* The **dura** layer of the meninges **contacts** the **endosteum** of the bones of the skull. The primary site for intraosseous meningioma is cranial meninges C700.

- Sphenoid wing
  - *Note 1:* Sphenoid wing meningiomas arise in the **cranial meninges** C700 which covers the bony structure called the sphenoid wing.
  - **Note 2:** The term "sphenoid wing meningioma" is used to identify the **location** of the meningioma because sphenoid wing meningiomas may be very **invasive**, spreading to the dura of the frontal, temporal and orbital regions.
- Cavernous sinus
  - Note 1: Cavernous sinus is located between the endosteal and meningeal layers of the dura.
  - *Note 2:* There is **no ICD-O site** code for cavernous sinus because tumors do not arise in the sinus itself; the primary sites are:
    - The cranial nerves passing through the sinus (trochlear, abducent C725) OR
    - The cerebral meninges/dura C700 covering the cranial nerve

### **Priorities for Coding Primary Site**

- **Note 1:** <u>Always</u> check the **operative report(s)** which will have **information** on whether the surgery or biopsy was **intracranial** (inside the cranium/skull) or **intraspinal** (within the dura/meninges covering the spinal cord).
- *Note 2:* Code the specific primary site. Use an **NOS** site code only when a specific site is not known.

#### Use the list in hierarchical order:

- 1. Resection
- A. Operative report(s)
- B. Pathology report(s)
- 2. Biopsy
  - A. Operative report(s)
  - B. Pathology report(s)
- 3. Resection and/or biopsy performed, but operative report(s) and pathology are <u>not available</u> (minimal information)
  - A. Tumor Board
  - B. Code from physician's documentation of original diagnosis from operative or pathology report OR
  - C. Physician's documentation of primary site in the medical record
  - **Example:** The patient had a **biopsy** done at **another facility**. The operative and pathology reports are not in the medical record. The **attending documents** that the patient had a biopsy of a **cerebral meningioma** at a different facility. Code the primary site cerebral meninges C700.
- 4. For cases diagnosed by imaging (no pathology/resection or biopsy) use information from scans in the following priority order:
  - A. MRI
  - B. CT
  - C. PET
  - D. Angiogram
- 5. See Table 2: Reportable Primary Sites to confirm the primary site is reportable.
- 6. When the primary site is cranial nerve **OR** peripheral nerve, see **Table 4**: **Coding Primary Site for Malignant Tumors of Cranial and Peripheral Nerves** to determine whether the portion of the nerve is cranial or peripheral (different site codes).

### **Reportable Primary Site Groups**

The three major groups of reportable sites are:

- 1. Intracranial (within the skull/cranium) AND
- 2. Spinal sites (spinal meninges and sites within the spinal meninges)
- 3. Peripheral nerves (extracranial or extraspinal nerves).

Terms and sites for these broad categories are:

#### **Reportable Primary Sites and their ICD-O Codes**

- 1. Intracranial (intra means inside or within; intracranial is inside the skull).
  - A. Cerebral/cranial dura/meninges C700. The cerebral meninges has three layers:
    - i. **Dura** mater is the **superficial** layer of meninges
      - Tightly adherent to skull
      - Contains folds and sinuses
      - Contacts **endosteum** which lines the bones of the skull
    - ii. Arachnoid mater forms the middle of the three layers of meninges
    - iii. Pia mater is the delicate vascular fibrous membrane which is adherent to the brain.
  - B. Brain C710-C719
  - C. Cranial nerves C722-C729. See Table 4: Coding Primary Site for Malignant Tumors of Cranial and Peripheral Nerves
  - D. Intracranial glands C751-C753
    - i. Craniopharyngeal duct C752
    - ii. Pineal gland C753
    - iii. Pituitary gland C751

### Continued on next page

- 2. Spinal sites: includes the spinal meninges and all structures within the meninges (Intradural, within/in the spinal meninges).
  - A. Spinal cord C720
  - B. Spinal meninges C701 covers/encloses the spinal nerve roots and the spinal cord.
  - C. Spinal nerve roots:
    - i. Cervical nerve, 8 pair, occipital nerve. Code to peripheral nerve of head, face, and neck C470
    - ii. Coccygeal nerve, 1 pair. Code to cauda equina C721
    - iii. Lumbar nerve, 5 pair. Code to cauda equina C721
    - iv. Sacral nerve, 5 pair. Code to cauda equina C721
    - v. Thoracic nerve, 12 pair. Code to peripheral nerves of thorax C473

#### 3. Peripheral nerves

- i. Cervical nerve, 8 pair, occipital nerve. Code to peripheral nerve of head, face, and neck C470
- ii. Thoracic nerve, 12 pair. Code to peripheral nerves of thorax C473
- iii. Lumbar nerve, 5 pair. Code to cauda equina C721
- iv. Sacral nerve, 5 pair. Code to cauda equina C721
- v. Coccygeal nerve, 1 pair. Code to cauda equina C721

### **Table 2: Reportable Primary Sites**

Use Table 2 to **determine** whether a primary site is **reportable**.

Site Group	Reportable Subsite Terms and Code	
Brain	Brain NOS C719	
	Brain stem C717	
	Cerebellum NOS C716	
	Cerebrum C710	
	Frontal lobe C711	
	Occipital lobe C714	
	Overlapping lesion of brain C718	
	Parietal lobe C713	
	Temporal lobe C712	
	Ventricle NOS C715	
Cranial Nerves	Abducent (cranial nerve VI) C725	
	Accessory (cranial nerve XI) C725	
	Acoustic (cranial nerve VIII) C724	
	Cranial nerve NOS C725	
	Facial (cranial nerve VII) C725	
	Glossopharyngeal (cranial nerve IX) C725	
	Hypoglossal (cranial nerve XII) C725	
	Oculomotor (cranial nerve III) C725	
	Olfactory (cranial nerve I) C722	
	Optic (cranial nerve II) C723	
	Trigeminal (cranial nerve V) C725	
	Trochlear (cranial nerve IV) C725	
	Vagus (cranial nerve X) C725	

Site Group	Reportable Subsite Terms and Code
Ill-Defined Sites Central Nervous System	Nervous system NOS C729 Overlapping lesion of brain and central nervous system C728
Intracranial Duct and Glands	Craniopharyngeal duct C752 Pineal gland C753 Pituitary gland C751
Meninges	Cerebral meninges C700 Meninges NOS C709 Spinal meninges C701
Peripheral Nerve and Autonomic Nervous System	Abdomen C474 Autonomic nervous system NOS C479 Head, face and neck C470 Lower limb and hip C472 Nerves of pelvis C475 Overlapping lesion of peripheral nerves and autonomic nervous system C478 Thorax C473 Trunk NOS C476 Upper limbs and shoulder C471 Spinal Nerve NOS C479
Spinal Sites	Cauda equina/ C721 Conus medullaris/filum terminale C720 Meninges NOS C709 Spinal cord C720 Spinal meninges C701

### Table 3: Specific Histologies, NOS, and Subtypes/Variants

**Table 3** lists the more common histologies for CNS and Peripheral Nerves. For hematopoietic neoplasms such as lymphomas, myelomas, etc., see the **Hematopoietic Database**.

*Note:* Behavior codes are not listed because all histologies are malignant /3.

Column 1 contains specific and NOS histology terms and codes.

- Specific histology terms do not have subtypes/variants
- NOS histology terms do have subtypes/variants

Column 2 contains synonyms for the specific or NOS term. Synonyms have the same histology code as the specific or NOS term. Column 3 contains subtypes/variants of the NOS histology. Subtypes/variants do not have the same histology code as the NOS term.

*Note:* All tumors are malignant/invasive /3.

Column 3 may contain NOS histologies which are part of a bigger histologic group. For example, sarcoma NOS 8800/3 (column 1) is a generic term that encompasses a number of soft tissue tumors, including chondrosarcoma 9220/3 (column 3). Chondrosarcoma is also a NOS because it has a subtype/variant, mesenchymal chondrosarcoma 9240. The subtype/variant is indented under the NOS (chondrosarcoma) in column 3. There is also a note in column 1 which calls attention to the fact that chondrosarcoma has a subtype/variant.

When subtypes/variants are indented under a NOS in Column 3, use coding rules for a NOS and a single subtype/variant. For example, chondrosarcoma 9220 and mesenchymal chondrosarcoma 9240 are a NOS and a subtype/variant, NOT two different subtypes.

Table begins on next page

Specific and NOS Histology Codes	Synonyms	Subtypes/Variants
Anaplastic ganglioglioma 9505		
Astroblastoma 9430	Astroblastoma, MN1-altered	
Astrocytoma NOS 9400	Astrocytoma, IDH-mutant, grade 2 Diffuse astrocytoma IDH-mutant Diffuse astrocytoma IDH-wildtype Diffuse astrocytoma NOS	Anaplastic astrocytoma IDH- mutant/wildtype; anaplastic astrocytoma NOS 9401 Astrocytoma, IDH-mutant, grade 3 9401 Astrocytoma, IDH-mutant, grade 4 9445 Gemistocytic astrocytoma IDH-mutant 9411 Pleomorphic xanthroastrocytoma /anaplastic pleomorphic xanthroastrocytoma 9424
Cauda equina neuroendocrine tumor 8693/3		
Note: This neoplasm is coded with /3 behavior even though it is a WHO Grade 1.		
Choriocarcinoma 9100		
Choroid plexus carcinoma 9390		
CNS embryonal tumor with rhabdoid features <b>9508</b>	Atypical teratoid/rhabdoid tumor Embryonal tumor with rhabdoid features	
CNS ganglioneuroblastoma 9490		CNS embryonal tumor, NEC/NOS 9473
CNS neuroblastoma 9500	CAN neuroblastoma, FOXR2-activated CNS Tumor with BCOR internal tandem duplication	

Specific and NOS Histology Codes	Synonyms	Subtypes/Variants
Diffuse leptomeningeal glioneuronal tumor 9509*	DLGNT	
Note 1: Cases diagnosed prior to 1/1/2023 are coded 9509/1. See the non-malignant CNS rules.		
Note 2: Cases diagnosed 1/1/2023 forward are coded 9509/3.		
Diffuse midline glioma H3 K27M mutant 9385*	Diffuse intrinsic pontine glioma Diffuse hemispheric glioma, H3 G34-mutant Diffuse pediatric-type high grade glioma, H3- wildtype and IDH-wildtype DIPG Infant-type hemispheric glioma	
Embryonal carcinoma 9070		Yolk sac tumor 9071
Embryonal tumor with multilayered rosettes C19MC-altered <b>9478</b> *	Embryonal tumor with multilayered rosettes, NOS ETMR	

<b>Specific and NOS Histology Codes</b>	Synonyms	Subtypes/Variants
Ependymoma 9391  Note: The following terms are synonyms of ependymoma, RELA fusion-positive 9396, and are NOT subtypes/variants of it. They are all coded 9396.  Posterior fossa group A (PFA) ependymoma  Posterior fossa group B (PFB) ependymoma  Spinal ependymoma, MYCN-amplified  Supratentorial ependymoma, YAP1 fusion-positive  Supratentorial ependymoma, ZFTA fusion-positive	Clear cell ependymoma Posterior fossa ependymoma, NOS Spinal ependymoma, NOS Supratentorial ependymoma, NOS Tanycytic ependymoma	Anaplastic ependymoma 9392 Ependymoma, RELA fusion-positive 9396* Posterior fossa group A (PFA) ependymoma Posterior fossa group B (PFB) ependymoma Spinal ependymoma, MYCN-amplified Supratentorial ependymoma, YAP1 fusion-positive Supratentorial ependymoma, ZFTA fusion-positive Papillary ependymoma 9393
Epithelioid hemangioendothelioma 9133		
Germinoma 9064		
Glioblastoma NOS 9440	Glioblastoma multiforme GBM Glioblastoma, IDH wild-type Epithelioid glioblastoma	Giant cell glioblastoma 9441 Glioblastoma IDH-mutant 9445* Gliosarcoma 9442

Specific and NOS Histology Codes	Synonyms	Subtypes/Variants
Glioma, NOS 9380		
Note: Glioma, NOS is considered an umbrella term. Additional testing should be performed to identify mutations and biomarkers that would provide a definitive type. A diagnosis of glioma, NOS is not recommended and may be used only when additional test were inconclusive.		
<b>IMPORTANT</b> : See M rules to determine multiple primaries.		
High-grade astrocytoma with piloid features 9421/3	HGAP	
<i>Note</i> : This term is reportable for cases diagnosed 1/1/2023 forward.		
Immature teratoma 9080		Mixed germ cell tumor 9085 Teratoma with malignant transformation 9084
Malignant meningioma 9530	Anaplastic meningioma	Papillary/rhabdoid meningioma 9538
Malignant peripheral nerve sheath tumor 9540	Malignant melanotic nerve sheath tumor Malignant perineurioma MPNST MPNST with perineural differentiation	Epithelioid malignant peripheral nerve sheath tumor <b>9542</b>

Specific and NOS Histology Codes	Synonyms	Subtypes/Variants
Medulloblastoma NOS 9470	Classic medulloblastoma Medulloblastoma, histologically defined	Anaplastic/large cell medulloblastoma 9474  Medulloblastoma described as one of the following 9471  Desmoplastic  SHH-activated and TP53-wildtype  With extensive nodularity  Nodular  Medulloblastoma non-WNT/non-SHH; medulloblastoma group 3 or group 4 9477*  Medulloblastoma SHH-activated and TP53-mutant 9476*  Medulloblastoma WNT-activated 9475*
Medulloepithelioma 9501		With activated 7175
Meningeal melanoma 8720		Meningeal melanomatosis 8728
Neuroepithelial tumor, malignant 8000/3		
Note: Neuroepithelial tumor is a rare tumor specific to children. These neoplasms have numerous subtypes which are not easily identified so a specific type may not be identified on the pathology report. WHO has not proposed an ICD-O code for this entity. The current option is to assign code 8000. Because these tumors are different, they are on a separate row.		

<b>Specific and NOS Histology Codes</b>	Synonyms	Subtypes/Variants
Oligoastrocytoma NOS 9382	Anaplastic oligoastrocytoma NOS	
Oligodendroglioma NOS 9450  Note: Oligodendroglioma NOS is used	Oligodendroglioma 1p/19q-codeleted Oligodendroglioma IDH-mutant Oligodendroglioma IDH-mutant and 1p/19q-	Anaplastic oligodendroglioma NOS <b>9451</b> IDH-mutant 1p/19q-codeleted IDH-mutant and 1p/19q-codeleted
when molecular markers cannot fully be determined	codeleted, grade 2	Oligodendroglioma, IDH-mutant and 1p/19q-codeleted, grade 3
Peripheral primitive neuroectodermal tumor <b>9364</b>	Ewing sarcoma pPNET	
Pilocytic astrocytoma 9421		Pilomyxoid astrocytoma 9425
Note 1: ICD-O-3 lists a behavior code of /1. It is collected as /3 in North America for cases diagnosed prior to 1/1/2023.		
Note 2: Beginning with cases diagnosed 1/1/2023 forward, pilocytic astrocytoma will no longer be reported with /3 behavior. Pilocytic astrocytoma and the related terms listed below are to be reported as a /1		
<ul> <li>Diffuse astrocytoma, MTB- or MYBL1-alterd</li> <li>Diffuse low-grade glioma, MAPK pathway- altered+</li> </ul>		
Pineal parenchymal tumor of intermediate differentiation <b>9362</b>	Pineoblastoma	Papillary tumor of the pineal region 9395
Pituitary adenoma/pituitary neuroendocrine tumor <b>8272</b> /3	PitNET

### Table 4: Coding Primary Site for Malignant Tumors of Cranial and Peripheral Nerves

- *Note 1:* Neoplasms arising in a **cranial** or **spinal** nerve are coded to the specific nerve in which it arises.
- **Note 2:** Neoplasms, commonly meningiomas, arising in the **dura/meninges** of an **intracranial** nerve (cranial nerve within the skull) are coded to **cerebral meninges** C700.
- *Note 3:* Neoplasms, commonly meningiomas, arising in the **dura/meninges** of the **spinal nerve roots** are coded to the ICD-O site code **spinal meninges** C701.
- *Note 4:* It is important to check the operative report to determine whether the surgery is intracranial or intradural.

Use **Table 4** to **determine** whether a malignant cranial nerve tumor should be coded to a cranial nerve or to a peripheral nerve. The anatomic location of the tumor determines whether the primary site is a peripheral or a cranial nerve.

- Column 1: The proper name for the cranial nerve (CN) and the cranial nerve number
- Column 2: The point at which the nerve exits the cranium
- Column 3: Portions of the nerve coded to cranial nerve
- Column 4: Portions of nerve coded to peripheral nerve

Name and CN #	Exits Cranium Through	Site Code: Cranial Nerve	Site Code: Peripheral Nerve
Cranial nerve NOS		Within cranium, unknown which nerve C725	
Olfactory CN 1	Cribriform plate	Surface of the <b>brain C722</b>	Originates on the olfactory mucosa of nasal cavity, then travels through the cribriform plate of the ethmoid bone C470
Optic CN 2	Optic canal	All portions are covered by meninges/dura so are <b>reportable</b> as <b>C723</b>	
Oculomotor CN 3	Superior orbital fissure	Originates in the midbrain C725	After exiting the superior orbital fissure, the nerve enters the <b>orbit C470</b>

Name and CN#	Exits Cranium Through	Site Code: Cranial Nerve	Site Code: Peripheral Nerve
Trochlear CN 4	Superior orbital fissure	Arises from the dorsal brain stem, loops around the brainstem and passes anteriorly within the subarachnoid space. It travels between the superior cerebellar and posterior cerebral arteries and through the dura, enters cavernous sinus C725	Enters the orbital fissure C470
Note: Trigeminal is derived from Latin trigeminus which means born in threes (tri) and born at the same time (germinal). As the name implies, the nerve separates into three branches; ophthalmic, maxillary, and mandibular	The ophthalmic, maxillary and mandibular branches leave the skull through three separate foramina.  Superior orbital fissure.  The foramen rotundum  The foramen ovale.	CN5 originates in the pons. Upon leaving the pons it enters a small fossa posterior and inferolateral to the cavernous sinus called Meckel's (trigeminal) cave C725.	<ul> <li>Ophthalmic nerve branch crosses the pterygopalatine fossa, inclines laterally on the back of the maxilla, and enters the orbit through the inferior orbital fissure where it is called the infraorbital nerve. It ends beneath the quadatus labii superius, and divides into multiple branches that spread to the side of the nose, the lower eyelid, and the upper lip C470</li> <li>Maxillary nerve leaves foramen rotundum and traverses the infraorbital groove and canal in the floor of the orbit, and appears on the face at the infraorbital foramen C470</li> </ul>
			• Mandibular nerve leaves via the foremen ovale travels along the mandibular groove C470

Name and CN #	Exits Cranium Through	Site Code: Cranial Nerve	Site Code: Peripheral Nerve
Abducent CN 6	Cranial meninges	Exits brainstem at junction of <b>pons</b> and the <b>medulla</b> , enters the <b>subarachnoid</b> space and runs upward between the pons and the <b>clivus</b> entering the <b>cavernous sinus C725</b>	Dorello's canal and travels to the tip of the temporal bone. Enters orbit C470
Facial CN 7	Internal acoustic meatus	CN7 originates in the pons, along the posterior cranial fossa (posterior cranial fossa (the posterior cranial fossa is part of the intracranial cavity.) C725	Enters the temple through the internal auditory meatus and runs through the facial canal. <b>C470</b>
Acoustic or vestibulocochlear CN 8	Internal acoustic meatus	Originates in the brain stem (medulla oblongata) between the base of the brain (pons) and the spinal cord C724  Both the vestibular branch and the cochlear branch are located in the inner ear	
Glossopharyngeal CN 9	Jugular foramin <sup>a</sup>	Originates in the anterior portion of the medulla oblongata C725	Jugular foramen Between the internal jugular vein and internal carotid artery Lies on the stylopharyngeus and middle pharyngeal constrictor muscle Passes under the hypoglossus muscle Palatine tonsil Extends to mucous glands of the mouth, and base of the tongue C470

Name and CN#	Exits Cranium Through	Site Code: Cranial Nerve	Site Code: Peripheral Nerve
Vagus CN 10	Jugular foramen	The vagus nerve originates from the <b>medulla</b> of the <b>brainstem</b> . <b>C725</b>	CN10 descends within the <b>carotid sheath</b> medial to the internal jugular vein at the root of the <b>neck C470</b> .
			The right vagus crosses in front of the subclavian artery and travels into the <b>fat behind</b> the blood <b>vessels</b> , reaching the <b>thorax</b> . It then inclines <b>behind</b> the <b>hilum</b> of the <b>right lung</b> and moves toward the esophagus. The nerve splits into the <b>right</b> and <b>left</b> vagus at the <b>esophageal plexus</b> C473
			Forms the anterior and posterior gastric nerves C475
Accessory CN 11	Jugular foramen	The spinal accessory nerve <b>originates</b> in the neurons of the upper spinal cord, specifically <b>C1-C5/C6</b> spinal <b>nerve roots</b> . The nerve enters the foramen magnum or lateral aspect	The nerve <b>exits</b> the skull through the jugular foramen. It then runs along the internal <b>carotid</b> artery within the <b>neck C470</b>
		of the <b>medulla oblongata</b> . The fibers of the spinal accessory nerve coalesce to <b>form spinal rootlets, roots</b> , and finally the <b>spinal accessory nerve</b> itself C725	Reaches the sternocleidomastoid muscle and the trapezius C476
Hypoglossal CN 12	Hypoglossal canal	CN12 starts in the hypoglossal nucleus of the brainstem, C725	CN12 exits the hypoglossal canal, traveling between the carotid artery and jugular vein, ending under the tongue C470

### Section 3: Additional Information to Complete the Abstract

#### **Conflicting Information on Pathology Report(s)**

The **classification** of brain tumors is a **subjective** matter because definitive criteria have not been established/accepted. Pathologists may **disagree** on the **histology** or **behavior**.

Follow the steps below for coding the histology and/or behavior of tumor when there are discrepancies:

- When possible, get advice from the pathologist
- When possible, contact attending physician
- When possible, consult with registry advisor
- If none of those **options** are **available**, code the histology and behavior from **the most dependable source** (see **Priority List for Coding Histology**).

The following are examples of how conflicting information occurs in single and in multiple pathology reports:

- Single pathology report:
  - o Multiple pathologists within the institution review the slides
  - O Slides are sent for **outside review** and the information from the **consulting** lab **conflicts** with the **original** pathology report
- <u>Multiple</u> pathology reports: The first report is from a biopsy and the **second report** is from a resection. Code the histology and/or behavior from the resection.

#### **Table 5: Paired Sites**

Use **Table 5** to identify sites for which laterality <u>must</u> be coded. Do <u>not</u> use this table to determine multiple primaries.

<b>Paired Sites and Codes</b>
Acoustic nerve C724
Cerebral meninges C700
Cerebrum C710
Cranial nerves C725
Frontal lobe C711
Occipital lobe C714
Olfactory nerve C722
Optic nerve C723
Parietal lobe C713
Temporal lobe C712

- *Note 1:* Midline tumors are common for glioblastoma multiform and meningiomas.
- *Note 2:* SEER allows laterality to be coded for sites other than those in the table.

### Table 6: Non-malignant CNS Tumors with the Potential of Transforming to Malignant Behavior

The word "transformation" as used in this table means that:

- o Residual tumor becomes more aggressive /3 **OR**
- o The tumor recurs as a more aggressive /3 histology

The table identifies non-malignant tumors that have the **potential** of **transforming to** a malignant tumor (**new primary**).

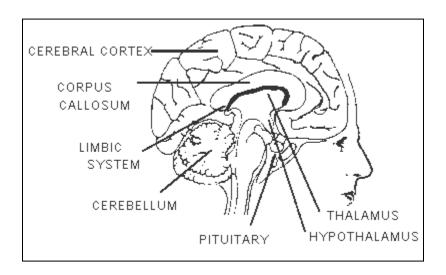

Use **Table 6** when directed to by the Multiple Primary Rules.

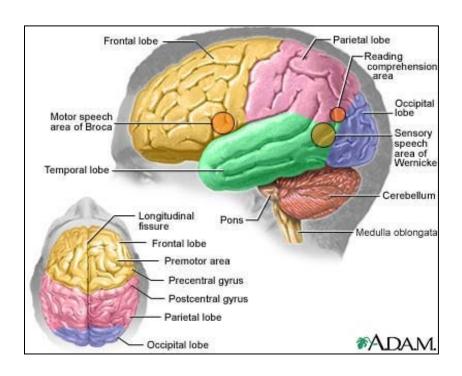

Column 1 is the non-malignant ICD-O histology term and code.

Column 2 is the malignant /3 ICD-O histology term and code to which the non-malignant tumor can transform.

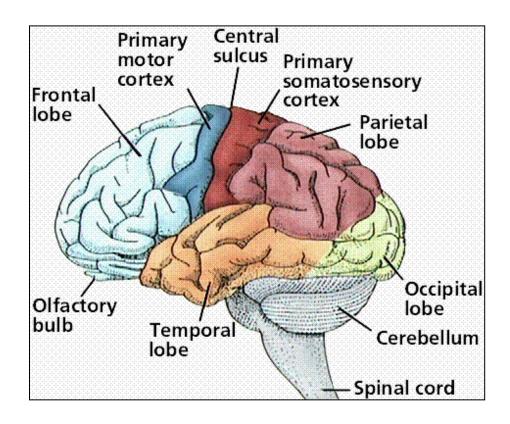

Original Histology and Code	Transformed Histology and Code
Chondroma 9220/0	Chondrosarcoma 9220/3
Ganglioglioma 9505/1	Anaplastic ganglioglioma 9505/3
Hemangioma 9120/0	Angiosarcoma 9120/3
Hemangiopericytoma 9150/1	Anaplastic hemangiopericytoma 9150/3
Leiomyoma 8890/0	Leiomyosarcoma 8890/3
Lipoma <b>8850/0</b>	Liposarcoma 8850/3
Osteoma 9180/0	Osteosarcoma 9180/3
Perineurioma 9571/0	Malignant perineurioma 9571/3
Rhabdomyoma 8900/0	Rhabdomyosarcoma 8900/3
Teratoma 9080/1	Immature teratoma 9080/3
Teratoma, mature 9080/0	Immature teratoma 9080/3

- *Note 1:* Non-malignant intracranial and CNS tumors have a separate set of rules.
- *Note 2:* Laterality **is not** used to determine multiple primaries for malignant CNS tumors.
- *Note 3:* Timing **is not** used to determine multiple primaries for malignant CNS tumors.
- *Note 4:* Separate GBM following an astrocytic or glial tumor is a multiple primary.
- *Note 5:* These rules are **NOT** used for tumor(s) described as metastases.
- Note 6: 2007 MPH Rules and 2018 Solid Tumor Rules are used based on date of diagnosis.
  - Tumors diagnosed 01/01/2007 through 12/31/2017: Use 2007 MPH Rules
  - Tumors diagnosed 01/01/2018 and later: Use 2018 Solid Tumor Rules
  - The original tumor diagnosed before 1/1/2018 and a subsequent tumor diagnosed 1/1/2018 or later in the same primary site: Use the 2018 Solid Tumor Rules.

### **Unknown If Single or Multiple Tumors**

- Rule M1 Abstract a single primary when it is not possible to determine if there is a single tumor or multiple tumors.
  - Note 1: Use this rule only after all information sources have been exhausted
  - Note 2: Examples of cases with minimal information include
    - Death certificate only (DCO)
    - · Cases for which information is limited to pathology report only
    - Outpatient biopsy with no follow-up information available
    - Multiple pathology reports which do not specify whether a single tumor or multiple tumors have been biopsied and/or resected

This is the end of instructions for Unknown if Single or Multiple Tumors.

<sup>i</sup>Prepare one abstract. Use the histology rules to assign the appropriate histology code.

### **Single Tumor**

**IMPORTANT:** The **major difference** between **M5** and **M6** is:

M5: No resection as first course of treatment AND when the same tumor is subsequently resected, pathology proves malignant behavior

M6: Tumor resected as first course of treatment. Subsequent tumor (recurrence or de novo) is malignant

- Rule M2 Abstract a single primary when there is a single tumor.
  - *Note 1:* A single tumor is <u>always</u> a single primary.
  - Note 2: The tumor may overlap onto or extend into adjacent/contiguous site or subsites.
  - *Note 3:* The tumor may have two or more histologic components.
  - Note 4: A glioblastoma multiforme 9440 (GBM) diagnosed in residual tumor, regardless of timing, is not a new primary
- Rule M3 Abstract a single primary when a neoplasm is originally diagnosed as an oligodendroglioma and subsequently recurs in residual tumor tissue with different <u>features</u> such as a densely cellular tumor with pseudo palisading necrosis.
  - **Note 1:** The pathology may state that the recurrence "looks like" or "has the appearance of" a glioblastoma multiforme (GBM). This is not a true GBM.
  - Note 2: Record as a recurrence for those registrars who collect recurrence data.
- Rule M4 Abstract a single primary<sup>i</sup> when a neoplasm is originally diagnosed as Glioma, NOS and subsequently recurs in residual tumor with a more specific histology.
  - **Note 1:** Glioma, NOS is considered an umbrella term. Additional testing should be performed to identify mutations and biomarkers that would provide a definitive histology type. A diagnosis of glioma, NOS is not recommended and may be used only when additional tests were inconclusive.
  - **Note 2:** If a specific histology is diagnosed in residual tumor or additional testing provides a definitive histology, edit the original abstract as follows:
    - Do not change the date of diagnosis
    - For cases that have been abstracted, update the ICD-O code based on the new findings
    - Report all data changes for cases which have been submitted to the central registry
  - *Note 3:* There is no time requirement.

- Rule M5 Abstract a single primary<sup>i</sup> (the malignant) when a single tumor meets the following two criteria:
  - 1. The original diagnosis was non-malignant /0 or /1 AND
    - o First course treatment was active surveillance (no tumor resection). Diagnosis was:
      - Clinical
      - Radiographic
      - Stereotactic biopsy
  - 2. Subsequent resection pathology is malignant /3
  - *Note 1:* This rule **clarifies** that a single tumor is **always** a single primary and the malignant behavior is reported.
  - **Note 2:** The **resection pathology** is **more accurate** than clinical, radiographic or stereotactic biopsy information. While stereotactic **biopsy provides** a **pathologic** specimen, it is small and **may not** include the **malignant** portion of tumor.
  - *Note 3:* There is **no time requirement** from initial diagnosis to resection.
  - *Note 4:* Edit the original abstract as follows:
    - Do not change date of diagnosis.
    - For cases which have been abstracted, **change behavior** code on original abstract from /0 or /1 to /3.
    - Report all data changes for cases which have been submitted to the central registry.
    - See the **COC** and **SEER manuals** for **instructions** on coding **other data items** such as Accession Year, Treatment and Sequence Number.
  - **Note 5:** The physician <u>may</u> have staged the non-malignant tumor at the time of original diagnosis (benign). The physician will also stage the malignant tumor. Staging and determining multiple primaries are done for different reasons. Staging determines which treatment would be most effective. Determining multiple primaries is done to stabilize the data for the study of epidemiology.
    - Example 1: A patient is diagnosed by MRI with ganglioglioma 9505/1 in July 2018. After months of active surveillance (watchful waiting), the patient becomes symptomatic. A resection is done in April 2019; the resection pathology is anaplastic ganglioglioma 9505/3. Change behavior code on the original abstract from /1 to /3. Do not change date of diagnosis.
    - Example 2: A November 15, 2017 MRI and subsequent stereotactic biopsy of lateral ventricle of brain show a mature teratoma 9080/1. The patient becomes symptomatic in 2018 and the neoplasm is resected on October 31, 2018. The resection pathology diagnoses immature teratoma 9080/3. Change behavior code on the original abstract. Do not change date of diagnosis.

This is the end of instructions for Single Tumor.

<sup>&</sup>lt;sup>i</sup> Prepare one abstract. Use the histology coding rules to assign the appropriate histology code.

### **Multiple Tumors**

- *Note 1:* Multiple tumors may be a single primary or multiple primaries.
- *Note 2:* Separate, non-contiguous tumors are always multiple primaries when:
  - In the CNS (see **Table 2**) AND in a site other than the CNS *Example*: Patient has a malignant nerve sheath tumor of the right arm C471 and non-metastatic adenocarcinoma of the lung. The lung is not a CNS site. Abstract two primaries.
  - In different CNS sites (see Rule M9)

**IMPORTANT:** The **major difference** between **M5** and **M6** is:

M5: No resection as first course of treatment AND when the same tumor is subsequently resected, pathology proves malignant behavior

M6: Tumor resected as first course of treatment. Subsequent tumor (recurrence or de novo) is malignant

- Rule M6 Abstract multiple primaries<sup>ii</sup> when there are multiple CNS tumors, one of which is malignant /3 and the other is non-malignant /0 or /1.
  - Original non-malignant tumor followed by malignant tumor
    - o Patient had a resection of the non-malignant tumor (not the same tumor) **OR**
    - o It is unknown/not documented if the patient had a resection
  - Simultaneous non-malignant and malignant tumors
    - o Abstract both the malignant and the non-malignant tumors
  - *Note 1:* The rules are hierarchical. Only use when previous rules do not apply.
  - Note 2: See Table 2 in the Equivalent Terms and Definitions for a listing of CNS sites.
  - *Note 3:* A non-malignant CNS tumor and a malignant CNS tumor are **always multiple** primaries (timing and primary sites are irrelevant). Prepare two abstracts; one for the non-malignant and another for the malignant tumor.

- Rule M7 Abstract multiple primaries<sup>ii</sup> when a patient has a glial tumor and is subsequently diagnosed with a glioblastoma multiforme 9440 (GBM).
  - **Note 1:** Definition of a glial tumor: Any tumor arising from the CNS glial cells. The following is simply a list of all tumors which would be classified as glial.
    - Astroblastoma 9430
    - Astrocytomas **9400** and all subtypes
      - o Anaplastic astrocytoma IDH-mutant/wildtype; anaplastic astrocytoma NOS 9401
      - o Gemistocytic astrocytoma IDH-mutant 9411
    - Diffuse midline glioma H3 K27M Mutant 9385
    - Ependymoma **9391** and all subtypes
      - o Anaplastic ependymoma 9392
      - o Ependymoma, RELA fusion-positive 9396
      - o Papillary ependymoma 9393
    - Glioblastoma 9440 and all subtypes (this is a glial tumor; however do not apply this rule to a GBM followed by a GBM)
      - o Giant cell glioblastoma 9441
      - o Glioblastoma IDH-mutant 9445
      - o Gliosarcoma 9442
    - Glioma NOS 9380
    - Oligodendroglioma and all subtypes 9450
      - o Anaplastic oligodendroglioma; IDH-mutant; 1p/19q-codeleted; IDH-mutant and 1p/19q-codeleted 9451
    - Pleomorphic xanthroastrocytoma **9424**
  - *Note 2:* This is a change from the 2007 Rules.
  - Note 3: Abstracting GBM as a new primary will allow analysis of:
    - The number of tumors that recur as a more aggressive histology (GBM)
    - The time interval between occurrence of the glial or astrocytic tumors and a GBM
    - Which histologies are more likely to recur as a GBM
  - **Note 4:** This rule applies to multiple tumors. A glioblastoma multiforme (GBM) that is subsequently diagnosed in residual tumor from a glial tumor is a single primary. See previous rules.

- Rule M8 Abstract a single primary<sup>i</sup> when there are separate, non-contiguous tumors in the brain (multicentric/multifocal) with the same histology XXXX. Tumors may be any of the following combinations:
  - In the same lobe; for example, two tumors in right temporal lobe C712 (same site code)
  - Different lateralities of the same lobe; for example, left and right frontal lobes C711 (same site code)
  - In different lobes; for example, parietal lobe C713 and occipital lobe C714 (different site codes)
  - **Example:** The patient had a resection of an anaplastic astrocytoma 9401 in the right parietal lobe. Three months later the patient is diagnosed with a de novo anaplastic astrocytoma in the left parietal lobe. This is one primary because neither laterality nor timing are used to determine multiple primary status.
  - *Note 1:* Multiple sites/subsites and/or different lateralities imply either metastatic or multifocal/multicentric disease. Glioblastoma multiforme commonly exhibits multiple tumors which are described as multifocal/multicentric.
  - *Note 2:* Metastases are never used to determine multiple primaries. **Seeding metastasis** is often noted for the following tumors:
    - Glioblastoma multiforme
    - pNET-medulloblastoma
    - Oligodendroglioma
  - *Note 3:* Hereditary syndromes frequently exhibit multiple tumors including the following:
    - Neurofibromatosis type 1 (NF1)
      - o Malignant peripheral nerve sheath tumors (MPNST)
    - Neurofibromatosis type 2 (NF2)
      - o Anaplastic ependymomas
      - o Meningiomas
  - *Note 4:* Most malignant neoplasms are **single tumors** with the exception of those listed in this rule.
  - *Note 5:* This is a **change** from/**clarification** to previous rules.

- Rule M9 Abstract multiple primaries<sup>ii</sup> when multiple tumors are present in any of the following sites or subsites:
  - Any lobe of the brain C710-C719 AND any other part of CNS
  - Cauda equina C721 AND any other part of CNS
  - Cerebral meninges C700 AND spinal meninges C701
  - Cerebral meninges C700 AND any other part of CNS
  - Any one of the cranial nerves C722-C725 AND any other part of the CNS
  - Any two or more of the cranial nerves
    - o C722 Olfactory, C723 Optic, C724 Acoustic, C725 Cranial nerves NOS
  - Meninges of cranial or peripheral nerves C709 AND any other part of the CNS
  - Spinal cord C720 AND any other part of CNS
  - Spinal meninges C701 AND any other part of CNS
- Rule M10 Abstract multiple primaries<sup>ii</sup> when separate, non-contiguous tumors are two or more different subtypes/variants in Column 3, Table 3 in the Equivalent Terms and Definitions. Timing is irrelevant.

*Note:* The tumors may be subtypes/variants of the **same** or **different** NOS histologies.

- Same NOS: Anaplastic astrocytoma IDH-mutant 9401 and gemistocytic astrocytoma IDH-mutant 9411 are both subtypes of astrocytoma NOS 9400/3 but are distinctly different histologies. Abstract multiple primaries.
- **Different NOS**: Papillary ependymoma 9393 is a subtype of ependymoma NOS 9391; gliosarcoma 9442 is a subtype of glioblastoma NOS 9440. They are distinctly different histologies. Abstract multiple primaries.
- **Rule M11** Abstract a **single primary**<sup>i</sup> when separate, non-contiguous tumors are Glioma NOS and a subtype/variant of Glioma NOS.

*Note*: The following is a list of all tumors which would be classified as subtypes/variants of glioma NOS.

- Astroblastoma 9430
- Astrocytomas 9400 and all subtypes
  - o Anaplastic astrocytoma IDH-mutant/wildtype; anaplastic astrocytoma NOS 9401
  - o Gemistocytic astrocytoma IDH-mutant 9411
- Diffuse midline glioma H3 K27M Mutant 9385
- Ependymoma **9391** and all subtypes
  - o Anaplastic ependymoma 9392
  - o Ependymoma, RELA fusion-positive 9396

- o Papillary ependymoma 9393
- Glioblastoma 9440 and all subtypes (this is a glial tumor; however do not apply this rule to a glial tumor followed by a GBM)
  - o Giant cell glioblastoma 9441
  - o Glioblastoma IDH-mutant 9445
  - o Gliosarcoma 9442
- Oligodendroglioma and all subtypes 9450
  - o Anaplastic oligodendroglioma; IDH-mutant; 1p/19q-codeleted; IDH-mutant and 1p/19q-codeleted 9451
- Pleomorphic xanthroastrocytoma 9424:
- Rule M12 Abstract a single primary<sup>i</sup> when separate, non-contiguous tumors are on the same row in Table 3 in the Equivalent Terms and Definitions. Timing is irrelevant.

*Note*: The same row means the tumors are:

- The same histology (same four-digit ICD-O code) **OR**
- One is the preferred term (column 1) and the other is a synonym for the preferred term (column 2) **OR**
- A NOS (column 1/column 2) and the other is a subtype/variant of that NOS (column 3) **OR**
- A NOS histology in column 3 with an indented subtype/variant

- Rule M13 Abstract multiple primaries<sup>ii</sup> when separate, non-contiguous tumors are on different rows in Table 3 in the Equivalent Terms and Definitions. Timing is irrelevant.
  - *Note 1:* Each row in the table is a **distinctly different** histology.
  - *Note 2:* 8000 is considered a different row ONLY when the diagnosis is neuroepithelial tumor. If the diagnosis is cancer, NOS, do not consider 8000 to be a separate row from other histologies for the purpose of the table rules.
    - Example 1: A tumor is diagnosed as 8000/3 Neuroepithelial tumor, NOS. Later, a separate tumor is diagnosed as Ependymoma 9391/3. These are considered separate rows.
    - Example 2: A tumor has a provisional diagnosis of 8000/0 and further diagnosis is done. A subsequent tumor in another lobe of the brain is diagnosed as Germinoma 9064/3. These are not considered separate rows.
- Rule M14 Abstract a single primary<sup>i</sup> when multiple tumors do not meet any of the above criteria.

*Note:* Use this rule as a last resort. Please confirm that you have not overlooked an applicable rule.

### This is the end of instructions for Multiple Tumors.

<sup>&</sup>lt;sup>i</sup> Prepare one abstract. Use the histology coding rules to assign the appropriate histology code. For registries collecting recurrence data: When a subsequent tumor is "single primary," record that subsequent tumor as a recurrence.

ii Prepare two or more abstracts. Use the histology rules to assign the appropriate histology code to each case abstracted.

*Note:* Non-malignant CNS tumors have a separate set of rules.

#### **Priority Order for Using Documentation to Identify Histology**

#### **IMPORTANT NOTES**

- 1. Code the histology diagnosed *prior* to **neoadjuvant treatment.** 
  - Note 1: Histology changes may occur following immunotherapy, chemotherapy, targeted therapy, and radiation therapy.
  - Note 2: Neoadjuvant treatment is any tumor-related treatment given prior to surgical removal of the malignancy.

**Exception:** If the initial diagnosis is based on histology from **FNA**, **smears**, **cytology**, or from a regional or metastatic site, and neoadjuvant treatment is given and followed by resection of primary site which identifies a different or specific histology, code the histology from the primary site.

2. Code the histology using the following priority list and the Histology Rules. Do not change histology in order to make the case applicable to staging.

The priority list is used for single primaries (including multiple tumors abstracted as a single primary)

#### This is a hierarchical list of source documentation.

- 1. Pathology/tissue from **resection** of primary tumor
  - A. Biomarkers
    - **Note 1:** Biomarkers are emerging as an important part of cancer diagnosis and treatment. Some biomarkers are used to determine treatment rather than histologic type. The efficacy of identification of histologic type using biomarkers differs from primary site to primary site. When a histologic type is identified using a biomarker, code the identified histology. Biomarkers do not identify all histologic types.
    - *Note 2:* Biomarkers are not listed because they change rapidly.
    - *Example:* Biomarkers are required to diagnose medulloblastoma SHH-activated and TP53-wildtype. Biomarkers include genetic testing, FISH, MYCN.
  - B. The addendum(s) and/or comment(s)
  - C. Final diagnosis / synoptic report as required by CAP
  - D. CAP protocol

### 2. Pathology/tissue from **biopsy** of primary tumor

#### A. Biomarkers

- **Note 1:** Biomarkers are emerging as an important part of cancer diagnosis and treatment. Some biomarkers are used to determine treatment rather than histologic type. The efficacy of identification of histologic type using biomarkers differs from primary site to primary site. When a histologic type is identified using a biomarker, code the identified histology. Biomarkers do not identify all histologic types.
- *Note 2:* Biomarkers are not listed because they change rapidly.
- *Example:* Biomarkers are required to diagnose medulloblastoma SHH-activated and TP53-wildtype. Biomarkers include genetic testing, FISH, MYCN.
- B. The addendum and/or comments
- C. Final diagnosis / synoptic report as required by CAP
- D. CAP protocol
- **Note 1:** Addendums and comments are given the second priority because they often contain information about molecular testing, genetic testing, and/or special stains which give a more specific diagnosis.
- *Note 2:* The pathologist's diagnosis is always the most reliable, so the final diagnosis is the third priority.
- *Note 3:* **Do not** use the microscopic or gross section of the pathology report for coding.
- Note 4: The CAP protocol is a checklist which
  - Provides guidelines for collecting the essential data elements for complete reporting of tumors and optimal patient care.
  - Allows physicians to check multiple histologies
- 3. Cytology (most frequently cerebrospinal fluid)
- 4. Tissue/pathology from a metastatic site
  - *Note 1:* Code the behavior /3
  - **Note 2:** The tissue from a **metastatic s**ite often shows **variations** from the primary tumor. When it is the only tissue available, it is **more accurate** than a scan.
- 5. **Scan:** The following list is in **priority** order.
  - A. MRI
  - B. CT
  - C. PET
  - D. Angiogram

- 6. Code the histology **documented** by the physician when none of the above are available. Use the **documentation** in the following **priority order** 
  - A. Treatment plan
  - B. Documentation from Tumor Board
  - C. Documentation in the medical record that refers to original pathology, cytology, or scan(s)
  - D. Physician's reference to type of cancer (histology) in the medical record
  - *Note 1:* Code the specific histology when documented.
  - *Note 2:* Code the histology to malignant neoplasm NOS 8000 or as stated by the physician when nothing more specific is documented.

### **Coding Histology**

- Note 1: The priority is to code the most specific histology. DO NOT USE BREAST HISTOLOGY CODING RULES FOR THIS SITE.
- *Note 2:* Only use this section for one or more histologies within a single tumor.
- *Note 3:* Do not use this section in place of the Histology Rules.
- 1. Code the most specific histology or subtype/variant, regardless of whether it is described as:
  - A. The majority or predominant part of tumor
  - B. The minority of tumor
  - C. A component
  - **Example 1:** Diagnosis for a single tumor is astrocytoma 9400 with the majority or predominant part of tumor being anaplastic astrocytoma IDH-mutant 9401. Code the subtype/variant: anaplastic astrocytoma IDH-mutant 9401.
  - **Example 2:** Diagnosis for a single tumor is CNS ganglioneuroblastoma 9490 with minority of tumor being CNS embryonal tumor 9473. Code the subtype/variant: CNS embryonal tumor 9473.
  - **Example 3:** Diagnosis for a single tumor is ependymoma 9391 with a component of anaplastic ependymoma 9392. Code the subtype/variant: anaplastic ependymoma 9392.

*Note:* When the most specific histology is described as differentiation or features, see #2.

- 2. Code the histology described as **differentiation** or **features/features of ONLY** when there is a specific ICD-O code for the "NOS with \_\_\_\_ differentiation".
  - *Note*: Do not code differentiation or features when there is no specific ICD-O code.
- 3. Code the specific histology described by ambiguous terminology (list follows) ONLY when A or B is true:
  - A. The only diagnosis available is one histology term described by ambiguous terminology
    - CoC and SEER require reporting of cases diagnosed only by ambiguous terminology
    - Case is accessioned (added to your database) based on ambiguous terminology and no other histology information is available/documented
    - **Example:** Outpatient biopsy says probably desmoplastic medulloblastoma. The case is accessioned (entered into the database) as required by both SEER and COC. No further information is available. Code the histology desmoplastic medulloblastoma The case meets the criteria in #3A.

- B. There is a **NOS** histology and a more specific (subtype/variant) described by ambiguous terminology
  - Specific histology is clinically confirmed by a physician (attending, pathologist, oncologist, etc.) **OR**
  - Patient is receiving treatment based on the specific histology described by ambiguous term
  - Example 1: The pathology diagnosis is astrocytoma consistent with gemistocytic astrocytoma IDH-mutant. The oncology consult says the patient has gemistocytic astrocytoma IDH-mutant in the occipital lobe. This is clinical confirmation of the diagnosis, code gemistocytic astrocytoma IDH-mutant. The case meets the criteria in bullet
  - **Example 2:** The pathology diagnosis is ependymoma consistent with papillary ependymoma. The treatment plan says the patient will receive the following treatment for papillary ependymoma. Treatment plan confirms papillary ependymoma; code papillary ependymoma. The case meets the criteria in bullet 2.

If the specific histology does not meet the criteria in #3B, then code the NOS histology.

### List of Ambiguous Terminology

Appears Most likely
Appears Presumed
Comparable with Probable
Compatible with Suspect(ed)
Consistent with Suspicious (for)
Favor(s) Typical (of)

Malignant appearing

- 4. **<u>Do not code</u>** histology when described as:
  - Architecture
  - Foci; focus; focal
  - Pattern

### **Single Tumor**

- Rule H1 Code the **reportable CNS** <u>tumor</u> (Table 3 in the Equivalent Terms and Definitions) when a patient has any of the following:
  - Neurofibromatosis type 1 (NF1)
  - Neurofibromatosis type 2 (NF2)
  - Schwannomatosis
  - **Note 1: Do not code** NF1 or NF2 as neurofibromatosis. NF1, NF2, and schwannomatosis are genetic syndromes which have a high risk of developing reportable and non-reportable tumors. **ONLY** abstract **reportable tumors** such as malignant peripheral nerve sheath tumors.
  - *Note 2:* Tumors are reportable when they meet the behavior (/3) and histology requirements (see **Reportability Criteria**).
  - *Note 3:* Schwannomatosis is a newer term for a distinct subtype/variant of the genetic diseases NF1 and NF2.
  - *Example:* Patient presents with vestibular schwannoma (acoustic neuroma). Genetic testing proves the patient has NF2. Report the acoustic nerve neuroma.
- Rule H2 Code malignant meningioma 9530 when the diagnosis specifically states malignant/invasive.
  - *Note:* Code the behavior designated in the pathology report. Do not code malignant /3 based on invasion of brain or skull. Atypical meningioma (non-malignant) may invade contiguous structures.
- **Rule H3** Code the histology when only **one histology** is present.
  - **Note 1:** Use **Table 3** to code histology. New codes, terms, and synonyms are included in **Table 3** and coding errors may occur if the table is not used.
  - *Note 2:* When the histology is **not listed** in **Table 3**, use the **ICD-O** and all **updates**.
  - *Note 3:* Submit a question to Ask a SEER Registrar when the histology code is not found in Table 3, ICD-O or all updates.

- Rule H4 Code the **subtype/variant** when there is a **NOS** and a **single subtype/variant** of that NOS such as the following: *Note:* All tumors are malignant/invasive /3.
  - Astrocytoma 9400 and a subtype/variant of astrocytoma
  - CNS ganglioneuroblastoma 9490 and a subtype/variant of CNS ganglioneuroblastoma
  - Embryonal carcinoma 9070 and a subtype/variant of embryonal carcinoma
  - Ependymoma 9391 and a subtype/variant of ependymoma
  - Glioblastoma 9440 and a subtype/variant of glioblastoma
  - Immature teratoma 9080 and a subtype/variant of immature teratoma
  - Malignant meningioma 9530 and a subtype/variant of malignant meningioma
  - Malignant peripheral nerve sheath tumor 9540 and a subtype/variant of malignant peripheral nerve sheath tumor
  - Medulloblastoma 9470 and a subtype/variant of medulloblastoma
  - Meningeal melanoma 8720 and a subtype/variant of meningeal melanoma
  - Oligodendroglioma 9450 and a subtype/variant of oligodendroglioma
  - Pilocytic astrocytoma 9421 and a subtype/variant of pilocytic astrocytoma
  - Pineal parenchymal tumor of intermediate differentiation **9362** and a subtype/variant of pineal parenchymal tumor of intermediate differentiation
  - Sarcoma 8800 and a subtype/variant of sarcoma

*Note:* See Table 3 in the Equivalent Terms and Definitions to find NOS and subtypes/variants.

### This is the end of instructions for Single Tumor

### **Multiple Tumors Abstracted as a Single Primary**

Rule H5 Code malignant meningioma 9530 when the diagnosis specifically states malignant/invasive.

*Note:* Code the behavior designated in the pathology report. Do not code malignant /3 based on invasion of brain or skull. Atypical meningioma (non-malignant) may invade contiguous structures.

- **Rule H6** Code the histology when only **one** histology is present in **all** tumors.
  - **Note 1:** Use **Table 3** to code histology. New codes, terms, and synonyms are included in **Table 3** and coding errors may occur if the table is not used.
  - *Note 2:* When the histology is **not listed** in **Table 3**, use the **ICD-O** and all **updates**.
  - Note 3: Submit a question to Ask a SEER Registrar when the histology code is not found in Table 3, ICD-O or all updates.
- Rule H7 Code the subtype/variant when <u>all tumors</u> are a **NOS** and a <u>single</u> subtype/variant of that NOS such as the following: *Note 1:* All tumors are malignant/invasive /3.

*Note 2:* See Table 3 in the Equivalent Terms and Definitions to find NOS and subtypes/variants.

- Astrocytoma 9400 and a subtype/variant of astrocytoma
- CNS ganglioneuroblastoma 9490 and a subtype/variant of CNS ganglioneuroblastoma
- Embryonal carcinoma 9070 and a subtype/variant of embryonal carcinoma
- Ependymoma 9391 and a subtype/variant of ependymoma
- Glioblastoma 9440 and a subtype/variant of glioblastoma
- Immature teratoma 9080 and a subtype/variant of immature teratoma
- Malignant meningioma 9530 and a subtype/variant of malignant meningioma
- Malignant peripheral nerve sheath tumor 9540 and a subtype/variant of malignant peripheral nerve sheath tumor
- Medulloblastoma 9470 and a subtype/variant of medulloblastoma
- Meningeal melanoma 8720 and a subtype/variant of meningeal melanoma
- Oligodendroglioma 9450 and a subtype/variant of oligodendroglioma
- Pilocytic astrocytoma 9421 and a subtype/variant of pilocytic astrocytoma
- Pineal parenchymal tumor of intermediate differentiation **9362** and a subtype/variant of pineal parenchymal tumor of intermediate differentiation
- Sarcoma 8800 and a subtype/variant of sarcoma

This is the end of instructions for Multiple Tumors Abstracted as a Single Primary

Code the histology using the rule that fits the case.
