| Corpus \& Uterus, NOS | Female | 195,484 | 219,407 | 219,611 | 631,801 | 691,628 |
| Ovary ${ }^{\text {f }}$ | Female | 61,143 | 70,057 | 70,127 | 184,919 | 207,305 |

U.S. 2014 cancer prevalence counts are based on 2014 cancer prevalence proportions from the SEER 9 registries and $1 / 1 / 2014$ U.S. population estimates based on the average of 2013 and 2014 population estimates from the U.S. Bureau of the Census.

Prevalence estimates are ambiguous for those with multiple cancers, unless the tumor
inclusion criteria are understood. Depending on the application, different inclusion criteria
may be appropriate. This table provides three different methods of tumor inclusion:
(c) First invasive tumor ever
(d) First invasive tumor for each cancer site diagnosed during the previous 39 years (1975-2013)
(e) First invasive tumor for each cancer site diagnosed during the previous 5 years (2009-2013)

For definitions (d) and (e) all sites is treated as a separate cancer "site".
Consider a woman who had three invasive cancers: Melanoma in 1981; Breast cancer in 2009; Melanoma in 2010.
In method (c) the melanoma is the woman's first cancer, and is counted for the melanoma and
all sites 39-year limited duration prevalence. For 5-year limited duration prevalence, the
woman is not counted at all since her first cancer occurred more than 5 years prior to $1 / 1 / 2014$.
In method (d) the 1981 melanoma is counted for the melanoma and all sites 39-year limited
duration prevalence. The 2009 breast cancer is counted for the breast 5-year and 39-year
limited duration prevalence.
In method (e) the 2009 breast cancer is counted for the breast cancer and all sites 5-year
limited duration prevalence. The 2010 melanoma is counted for 5-year limited duration
prevalence for melanoma.
Ovary excludes borderline cases or histologies $8442,8451,8462,8472$, and 8473.

U.S. 2014 cancer prevalence counts are based on 2014 cancer prevalence proportions from the SEER 9 registries (San Francisco, Connecticut, Detroit, Hawaii, Iowa, New Mexico, Seattle, Utah, and Atlanta) and 1/1/2014 U.S. population estimates based on the average of 2013 and 2014 population estimates from the U.S. Bureau of the Census. Prevalence was calculated using the first invasive tumor for each cancer site diagnosed during the previous 39 years (1975-2013).
Cases diagnosed more than 39 years ago were estimated using the completeness index method (Capocaccia et. al. 1997, Merrill et. al. 2000).
Due to rounding, the sum of the age specific estimates may not equal the all ages estimate.

WARNING: The Prevalence Estimates presented on this page utilize a different tumor selection criteria from previous CSR releases and are NOT directly comparable to estimates from previous CSR releases.
Please see the Prevalence Comparison Chapter of this CSR for more information.

a U.S. 2014 cancer prevalence counts are based on 2014 cancer prevalence proportions from the SEER 9 registries (San Francisco, Connecticut, Detroit, Hawaii, Iowa, New Mexico, Seattle, Utah, and Atlanta) and $1 / 1 / 2014$ U.S. population estimates based on the average of 2013 and 2014 population estimates from the U.S. Bureau of the Census. Prevalence was calculated using the
first invasive tumor for each cancer site diagnosed during the previous 39 years (1975-2013).
Cases diagnosed more than 39 years ago were estimated using the completeness index method (Capocaccia et. al. 1997, Merrill et. al. 2000).
Due to rounding, the sum of the age specific estimates may not equal the all ages estimate.
