Coding Guidelines
BLADDER
C670–C679

Primary Site

C670 Trigone of bladder
    Base of bladder
    Floor
    Below interureteric ridge (interureteric crest, or interureteric fold)

C671 Dome of bladder
    Vertex
    Roof
    Vault

C672 Lateral wall of bladder
    Right wall
    Left wall
    Lateral to ureteral orifice
    Sidewall

C673 Anterior wall of bladder

C674 Posterior wall of bladder

C675 Bladder neck
    Vesical neck
    Internal urethral orifice
    Internal urethral/uretero orifice

C676 Ureteric orifice
    Just above ureteric orifice

C677 Urachus
    Mid umbilical ligament
    Urachal remnant

C678 Overlapping lesion of bladder
    Lateral-posterior wall (hyphen)
    Fundus

C679 Bladder, NOS
    Lateral posterior wall (no hyphen)
Priority Order for Coding Subsites

Use the information from reports in the following priority order to code a subsite when the medical record contains conflicting information:

Operative report (TURB)
Pathology report

Multifocal Tumors

Invasive tumor in more than one subsite

Assign site code C679 when the tumor is multifocal (separate tumors in more than one subsite of the bladder).

If the TURB or pathology proves invasive tumor in one subsite and in situ tumor in all other involved subsites, code to the subsite involved with invasive tumor.
Bladder Wall Pathology

The bladder wall is composed of three layers. There may be “sub layers” within the major layer of the bladder.

<table>
<thead>
<tr>
<th>Bladder Layer</th>
<th>Sub layer</th>
<th>Synonyms</th>
<th>Staging</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mucosa</td>
<td></td>
<td>Epithelium, transitional epithelium,urothelium,mucosal surface, transitional mucosa</td>
<td>No blood vessels, in situ/noninvasive</td>
<td>First layer on inside of bladder; Lines bladder, ureters, and urethra</td>
</tr>
<tr>
<td>Basement membrane</td>
<td></td>
<td>No invasion of basement membrane is in situ</td>
<td>Invasion/penetration of basement membrane is invasive</td>
<td>Single layer of cells that lies beneath the mucosal layer separating the epithelial layer from the lamina propria</td>
</tr>
<tr>
<td>Submucosa</td>
<td>Submucous coat, lamina propria, areolar connective tissue</td>
<td>Invasive</td>
<td>Areolar connective tissue interlaced with the muscular coat. Contains blood vessels, nerves, and in some regions, glands</td>
<td></td>
</tr>
<tr>
<td>Lamina propria</td>
<td>Submucosa, suburothelial connective tissue, subepithelial tissue, stroma, muscularis mucosa, transitional epithelium</td>
<td>Invasive</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Muscle</td>
<td>Bladder wall</td>
<td>Muscularis, muscularis propria, muscularis externa, smooth muscle</td>
<td>Invasive</td>
<td></td>
</tr>
</tbody>
</table>

Tumor extends through the bladder wall (invades regional tissue) when the tumor is stated to involve one of the following areas:

**Serosa (Tunica serosa):** The outermost serous coat is a reflection of the peritoneum that covers the superior surface and the upper parts of the lateral surfaces of the urinary bladder. The serosa is part of visceral peritoneum. The serosa is reflected from these bladder surfaces onto the abdominal and pelvic walls.

**Perivesical fat**

**Adventitia:** Some areas of the bladder do not have a serosa. Where there is no serosa, the connective tissue of surrounding structures merges with the connective tissue of the bladder and is called adventitia.
HISTOLOGY

Most bladder cancers are transitional cell carcinomas. Other types include squamous cell carcinoma and adenocarcinoma. Adenocarcinomas tend to occur in the urachus or, frequently, the trigone of the bladder. Other bladder histologic types include sarcoma, lymphoma, and small cell carcinoma. Rhabdomyosarcoma occurs in children.

Behavior Code

Code the behavior as malignant /3, not in situ /2, when
- the only surgery performed is a transurethral resection of the bladder (TURB) documenting that depth of invasion cannot be measured because there is no muscle in the specimen
and
- the physician’s TNM designation is not available
or
- the pathology report says the submucosa is invaded with tumor
or
- the pathology report does not mention whether the submucosa is free of tumor or has been invaded by tumor

Code the behavior as in situ /2 when
- the TNM designation is Ta for TURB with no muscle in the specimen
or
- the pathology report says the submucosa is free of tumor

FIRST COURSE TREATMENT

TREATMENT MODALITIES (most common treatments)

TURB with fulguration
TURB with fulguration followed by intravesical BCG (bacillus Calmette-Guerin) is usually used for patients with multiple tumors or for high-risk patients.
TURB with fulguration followed by intravesical chemotherapy
Photodynamic therapy (PDT) using laser light and chemotherapy
Segmental cystectomy (rare)
Radical cystectomy in patients with extensive or refractory superficial tumor
Internal irradiation (needles, seeds, wires, or catheters placed into or near the tumor) with or without external-beam irradiation
Chemotherapy
Immunotherapy/biologic therapy
