Debulking is a partial or total removal of the tumor mass and can involve the removal of multiple organ sites. It may include removal of ovaries and/or the uterus (a hysterectomy). The pathology report may or may not identify ovarian tissue. A debulking is usually followed by another treatment modality such as chemotherapy.

[**SEER Note:** Debulking or cytoreductive surgery is implied by the following phrases in the operative report, pathology report, discharge summary, or consultation. (This is not intended to be a complete list. Other phrases may also imply debulking.)

- Adjuvant treatment pending surgical reduction of tumor
- Ovaries, tubes buried in tumor
- Tumor burden
- Tumor cakes
- Very large tumor mass

Do not code debulking or cytoreductive surgery based on: multiple biopsies alone, the mention of “multiple tissue fragments” or “removal of multiple implants.” Multiple biopsies and multiple specimens confirm the presence or absence of metastasis.]
