Question 20021052

References:

SEER EOD-88,3rd Ed, 66, 68

Question:

EOD-Extension--Pancreas: Should these terms be ignored when coding extension to 10 or 30, or do they indicate involvement for non-surgically treated pancreas primaries?

- 1) Stricture of the common bile duct
- 2) Common bile duct is narrowed
- 3) Common bile duct is obstructed
- 4) Common bile duct dilation
- 5) Malignant stricture of the common bile duct
- 6) Ampullary or common bile duct stricture with a negative biopsy or brush.

Discussion:

Answer:

For cases diagnosed 1998-2003:

Ignore these terms when coding extension to 10 or 30. These terms do not verify involvement by pancreatic cancer of the organs mentioned. Other non-malignant circumstances could cause these conditions.
