Question 20031081

References:

SEER EOD-88, 3rd Ed, 90

Question:

Primary Site/EOD-Size of Primary Tumor--Lung: If the only lung mass described in CXR is a "hilar mass," is the primary site coded to C34.9 [Lung, NOS] or C34.0 [Main Bronchus; incl. Carina]? Also, can the size of the hilar mass be used to code the size of tumor field?

Discussion:

Answer:

Because the only description available is "hilar mass," code primary site as C34.0.

For cases diagnosed 1998-2003: Use size of mass for EOD-Size of Primary Tumor.

Cancer Site Category:

Lung

Data Item Category:

Primary site

Other Category:

N/A

Year:

2003
