Question 20041070

References:

2004 SEER Manual, 73

Question:

Primary Site: What would the primary site be for carcinoma of the renal pelvis, status post transplant? Please see details below. See Discussion.

Discussion:

The patient has a renal pelvis urothelial carcinoma confined to the pelvis but is status post renal pelvic transplant of the same renal pelvis.

Answer:

Code the primary site to renal pelvis [C659]. Code the site in which the primary tumor originated. The transplant status in this example does not affect the primary site.

Cancer Site Category:

N/A

Data Item Category:

Primary site
