

# SEER Inquiry System - Report

Produced: 05/03/2024 11:54 PM

## Question 20051012

### References:

2004 SEER Manual, 1

### Question:

Reportability: Are malignant tumors of genital skin reportable? On page 1 of the 2004 SEER Manual, Reportable Diagnoses, 1.b.i. Exceptions: malignant and invasive histologies not required by SEER - Skin. There is no longer a note that states that lesions ARE reportable for skin of the genital sites. Has SEER discontinued the collection of malignant skin tumors of the genital sites OR is the manual in error?

### Discussion:

### Answer:

The histologies listed in the exception on page 1 are NOT reportable when the topography code is C440-C449. The manual specifically lists the topography codes in 1.b.1. Diagnoses with the listed histologies ARE reportable when the topography code is NOT C440-C449. Genital skin sites are not coded C440-C449 so a note is not needed.

### Cancer Site Category:

N/A

### Data Item Category:

N/A
