## Question 20051066

### References:

CS Manual, Part II, 440-441

### Question:

CS Site Specific Factor--Prostate: Explain the difference among SSF4 prostate codes 150 [No clinical involvement of prostatic apex & prostatectomy apex extension unknown], 510 [Clinical involvement of prostatic apex unknown & No prostatectomy apex extension], and 550 [Clinical involvement of prostatic apex unknown & prostatectomy apex extension unknown].

### Discussion:

### Answer:

This answer was provided in the context of CSv1 coding guidelines. The response may not be used after your registry database has been converted to CSv2. Site Specific Factor 4 captures the status of clinical apex involvement and prostatectomy apex involvement. The first digit in codes 110-550 indicates the clinical status of apex involvement. The second digit indicates apex involvement found at prostatectomy. The third digit is always zero. For both first and second digits, the codes and definitions are the same:

1 - No involvement of prostatic apex

2 - Into prostatic apex/arising in prostatic apex, NOS

3 - Arising into prostatic apex

4 - Extension into prostatic apex

5 - Apex extension unknown

Code 150 = No clinical involvement of prostatic apex & prostatectomy apex extension unknown

Code 510 = Clinical involvement of prostatic apex unknown & No prostatectomy apex extension

Code 550 = Clinical involvement of prostatic apex unknown & prostatectomy apex extension unknown

### Cancer Site Category:

Prostate

### Data Item Category:

N/A

### Other Category:

N/A
