## Question 20051067

### References:

WHO Class Hem & Lymph Tumors, 115-117. 2004

### Question:

Reportability--Lung: Is sclerosing hemangioma of the lung with multiple regional lymph nodes metastases reportable?

### Discussion:

### Answer:

No, it is not reportable. According to the WHO Classification of Lung Tumours, sclerosing hemangioma "behaves in a clinically benign fashion...Reported cases with hilar or mediastinal lymph node involvement do not have a worse prognosis."

### Cancer Site Category:

Lung

### Data Item Category:

N/A

### Other Category:

Reportability

### Year:

2005
