## Question 20061051

### References:

#1: 2004 SEER Manual, 1

#2: ICD-O-3

### Question:

Reportability--Melanoma: Is the final diagnosis for an excisional skin biopsy of "compound nevus with severe cytoarchitectural atypia and regression" reportable if a re-excision may be clinically indicated because there is an "overlap of morphology between malignant melanoma and nevi with severe atypia, and there's evidence of regression"?

### Discussion:

### Answer:

Compound nevus with severe atypia is not reportable unless also stated to be malignant melanoma or melanoma in situ.

### Cancer Site Category:

Melanoma

### Data Item Category:

N/A

### Other Category:

Reportability

### Year:

2006
