Question 20081112

References:

2007 SEER Manual, C-644. Appendix C

Question:

MP/H Rules--Breast: Is a 2008 invasive ductal carcinoma counted as a new primary when it follows a 2005 invasive lobular carcinoma diagnosed in the same breast? See Discussion.

Discussion:

The patient has invasive lobular breast carcinoma excised in 2005. She returns in 2008 with a new invasive ductal carcinoma tumor same breast. Following MP/H rules, M10 seems to apply, which states this is still a single primary. Does this mean that this invasive ductal carcinoma is ignored and the patient remains in the registry with only a lobular carcinoma primary?

Answer:

For cases diagnosed 2007 or later:

Rule M10 applies. The 2008 diagnosis is not a new primary.

The abstract for the 2005 diagnosis should be annotated to include the new information.
