Question 20100040

References:

Heme & Lymph Manual & DB

Question:

Histology--Heme & Lymphoid Neoplasms: How is this field coded for a patient with a negative bone marrow and multiple plasmacytomas in different bone sites (e.g., thoracic vertebrae and left femur)?

Discussion:

Answer:

For cases diagnosed 2010 and forward, access the Hematopoietic Database at <http://seer.cancer.gov/seertools/hemelymph>.

Code the primary site to C419 [Bone, NOS] and the histology to 9731/3 [solitary plasmacytoms].

The vertebral lesions are common for plasmacytomas, as are lesions of the femur. If the patient does not meet the criteria of plasma cell myeloma/multiple myeloma (which is 20% of the leukocyte differential count), do not code the histology to multiple myeloma.

Per Rule M2, abstract a single primary when there is a single histology.

Per Rule PH3, code the primary site to the where the plasmacytoma originated and code the histology of bone () when the diagnosis is multiple plasmacytomas of the bone.

SEER*Educate provides training on how to use the Heme Manual and DB. If you are unsure how to arrive at the answer in this SINQ question, refer to SEER*Educate to practice coding hematopoietic and lymphoid neoplasms. Review the step-by-step instructions provided for each case scenario to learn how to use the application and manual to arrive at the answer provided. <https://educate.fhcrc.org/LandingPage.aspx>.
(<https://educate.fhcrc.org/LandingPage.aspx>).

History:

This SINQ question has been updated to the Hematopoietic & Lymphoid Neoplasm Manual & Database published January 2014.

The original answer below was written based on the rules in 2010

The vertebral lesions are common, as are lesions of the femur. If the patient does not meet the criteria of plasma cell myeloma/multiple myeloma (which is 20% of the leukocyte differential count), do not code the histology to multiple myeloma.

The answers for SINQ questions with 2010 ID numbers were written using the 2010 Heme & Lymph Manual & DB. The instructions for using the 2010 Hematopoietic Database were written for the version of the software in use as of 5/24/2011. The user interface of the web-based 2010 Hematopoietic Database available from the SEER website varies slightly from the 5/24/2011 version in that the web-based version provides all the disease information in one scrollable window.

For cases diagnosed 2010-2011, access the 2010 Hematopoietic Database at <http://seer.cancer.gov/tools/heme/>. Click on Hematopoietic Project. Click on Hematopoietic and Lymphoid Database. For 2010-2011 diagnoses, click on the "use the 2010 database" label in the upper right corner of the screen. The 2010 Hematopoietic Coding Manual (PDF) button will appear to indicate the correct version of the program is available now for query.

Cancer Site Category:

Heme & Lymphoid Neoplasms

Data Item Category:

Histology

Other Category:

N/A

Year:
2010
