Question 20130084

References:

Heme & Lymph Manual & DB

Question:

Multiple primaries--Heme & Lymphoid Neoplasms: How many primaries are accessioned when a patient is diagnosed on a 3/16/12 lymph node biopsy with diffuse large B-cell lymphoma which was followed on 4/18/12 with bone marrow biopsy diagnosis of follicular lymphoma? See Discussion.

Discussion:

The patient has extensive right-sided cervical, supraclavicular, hilar, mediastinal and gastrohepatic adenopathy. A cervical node biopsy on 3/16/2012 showed DLBCL. On 04/18/2012 a bone marrow biopsy showed follicular lymphoma. The patient was started on CHOP/Rituxan after the bone marrow biopsy.

Answer:

For cases diagnosed 2010 and forward, access the Hematopoietic Database at <http://seer.cancer.gov/seertools/hemelymph>.

This case is accessioned as a single primary, diffuse large B-cell lymphoma [9680/3] per Rule M12. Abstract the acute neoplasm (DLBCL) when a patient is originally diagnosed with an acute neoplasm and the neoplasm reverts to the chronic neoplasm (follicular lymphoma) AND the patient has not been treated for the acute neoplasm.

SEER*Educate provides training on how to use the Heme Manual and DB. If you are unsure how to arrive at the answer in this SING question, refer to SEER*Educate to practice coding hematopoietic and lymphoid neoplasms. Review the step-by-step instructions provided for each case scenario to learn how to use the application and manual to arrive at the answer provided. <https://educate.fhcrc.org/LandingPage.aspx> (<https://educate.fhcrc.org/LandingPage.aspx>).
