## Question 20210075

### References:

#1: 2021 SEER Manual. Appendix E-Reportable and Non-reportable examples

#2: American College of Radiology. <https://www.acr.org/>

### Question:

Reportability: What American College of Radiology Reporting and Data Systems (RADS) can be used to determine reportability? See Discussion.

### Discussion:

LI-RADS (liver), PI-RADS (prostate), and TI-RADS (thyroid) can be used to determine reportability. BI-RADS (breast) and Lung-RADS cannot be used to determine reportability. Can these systems below to determine reportability?

C-RADS (from CT colonography)

NI-RADS (head & neck)

O-RADS (ovarian-adnexal)

### Answer:

The following cancer cases are reportable unless there is information to the contrary.

-Liver cases with an LI-RADS category LR-4 (reportable since 2021) or LR-5 (reportable since 2016)

-Prostate cases with a PI-RADS category 4 or 5 (reportable since 2017)

The following are not reportable without additional information.

-Breast cases designated BI-RADS 4, 4A, 4B, 4C or BI-RADS 5

-Lung cases designated Lung-RADS 4A, 4B, or 4X

-Liver cases based only on an LI-RADS category of LR-3

-Colon cases with only C-RADS information (C-RADS category C4 is not reportable by itself)

-Head and Neck cases with only NI-RADS information (NI-RADS category 3 is not reportable by itself)

-Ovarian or fallopian tube cases with only O-RADS information (none of the O-RADS categories are reportable without additional information)

-Thyroid cases with only TI-RADS information (none of the TI-RADS categories are reportable without additional information)

### Cancer Site Category:

N/A

### Data Item Category:

N/A

### Other Category:

Reportability

### Year:
