Question 20230038

References:

Heme & Lymph Manual & DB

Question:

Histology/Heme & Lymphoid Neoplasms--Mycosis Fungoides: What is the histology code for lymphomatoid papulosis that transforms initially to mycosis fungoides (MF)/cutaneous T-cell lymphoma (CTCL) and subsequently to CTCL with large cell transformation, and is it a new primary? See Discussion.

Discussion:

Disease History

2018 - Lymphomatoid papulosis (non-reportable)

2020 - Transform to CTCL (and called Mycosis Fungoides specifically) (CTCL/MF same primary)

2021 - Transform to CTCL with large cell transformation

Answer:

Abstract a single primary and assign code 9700/3 for MF. According to our subject matter expert, this is all MF. When MF progresses, there can be large cd30 positive T cells. This is not the same as anaplastic large cell lymphoma.
