SKIN

RELATIONSHIP BETWEEN THICKNESS, DEPTH OF INVASION, AND CLARK LEVEL

(Use Only for Melanoma of the Skin; Vulva, Penis, and Scrotum)

Below is a guideline for melanoma of the skin for Breslow’s depth and/or Clark’s Level.

Note: Clark’s level is not routinely used, but is kept here for historical purposes.

MELANOMA SKIN

8720-8790 (C000-C002, C006, C210, C440-C449, C500, C510-C512, C518-C519, C600-C602, C608-C609, C632)

Note 1: The following sources were used in the development of this chapter

- Collaborative Stage Data Collection System, version 02.05: https://cancerstaging.org/cstage/Pages/default.aspx

Note 2: For melanoma of sites other than those above

- C003-C005, C008-C069, C090-C148, C300-C329: See Melanoma Head and Neck
- C690: See Melanoma Conjunctiva
- C693, C694: See Melanoma Uvea
- For all other sites, use the appropriate site-specific schema

Note 3: Lymph nodes with isolated tumor cells (ITCs) are counted as positive lymph nodes. ITCs are defined as any tumor deposits in lymph nodes less than or equal to 0.2 mm.

Note 4: If there is a discrepancy between the Clark level and the pathological description of extent (invasion into the layers of the dermis), use the higher (more extensive) code.

Note 5: Code the greatest extent of invasion from any procedure performed on the lesion, whether it is described as a biopsy or an excision. For example, if a punch biopsy with involvement of Clark level IV is followed by a re-excision with residual tumor involving Clark level II, code 2 (Clark level IV).

Note 6: Satellite lesions/nodules or in-transit metastases are coded as regional nodes (code 3).
