SUMMARY STAGE

1 Localized only

Invasive tumor confined to cortex of bone

Extension beyond cortex to periosteum (no break in periosteum)

Localized, NOS

2 Regional by direct extension only

Extension beyond periosteum to surrounding tissues:
   Adjacent bone/cartilage
   Adjacent skeletal muscle(s)

3 Regional lymph node(s) involved only

Regional lymph node(s), NOS

4 Regional by BOTH direct extension AND regional lymph node(s) involved

Codes (2) + (3)

5 Regional, NOS
7 Distant site(s)/node(s) involved

Distant lymph node(s)

Extension to:
  Skin

Further contiguous extension

Metastasis

9 Unknown if extension or metastasis

Note 1: Code 0 is not applicable for this scheme.

Note 2: The cortex of a bone is the dense outer shell that provides strength to the bone; the spongy center of a bone is the cancellous portion. The periosteum of the bone is the fibrous membrane covering of a bone which contains the blood vessels and nerves; the periosteum is similar to the capsule on a visceral organ.

Note 3: Regional lymph nodes are defined as those in the vicinity of the primary tumor.

Note 4: Regional lymph node involvement is rare. If there is no mention of lymph node involvement clinically, assume that lymph nodes are negative.
